

IN THE UNITED STATES DISTRICT COURT
FOR THE STATE OF NEW JERSEY
DOCKET NO. 83-2864SA

ANTONIO CIPOLLONE, Individually
and as Executor of the Estate
of ROSE D. CIPOLLONE,
Plaintiff

vs.

DEPOSITION UPON
ORAL EXAMINATION
OF
SAUL SHIFFMAN, Ph.D.
(VOLUME I)

LIGGETT GROUP, INC., a Delaware
Corporation, PHILIP MORRIS, INC.,
a Virginia Corporation, and LOEW'S
THEATRES, INC., a New York Corporation,
Defendants

T R A N S C R I P T of the stenographic
notes of DIANA L. R. SENATORE, a Notary Public and
Certified Shorthand Reporter of the State of New
Jersey, taken at the offices of WILENTZ, GOLDMAN &
SPITZER, P.C., 90 Woodbridge Center Drive,
Woodbridge, New Jersey, on Thursday, March 7, 1991,
commencing at approximately 10:00 in the forenoon.

1 S A U L M A R K S H I F F M A N, P h.D.

2 residing at [DELETED]

3 having

4 been duly sworn, testifies as follows:

5 DIRECT EXAMINATION BY MR. KEARNEY:

6 Q Dr. Shiffman, my name is James Kearney
7 and I represent Liggett, one of the defendants in this
8 case.

9 Have you ever been deposed before?

10 A No.

11 Q I assume that Mr. Darnell or some other
12 lawyer told you what the process was at a deposition?

13 A Yes.

14 Q What did he tell you?

15 A That you would ask questions and that I was to
16 consider them carefully and answer them.

17 Q All right. That's exactly what I'm going
18 to do. And I would ask you to consider them carefully
19 and answer them.

20 A Okay.

21 Q If you don't understand a question, I
22 would ask you to tell me that and I would attempt to
23 resolve the misunderstanding.

24 A Okay.

25 Q Therefore, if you answer a question I

1 assume that you understand it.

2 A Right.

3 Q At any time that you want to take a
4 break, you can do that.

5 A All right.

6 Q Can you briefly describe your educational
7 background for us?

8 A Yes. I have a bachelor's degree from Brooklyn
9 College, City of New York. City University of New
10 York.

11 I have master's degree and Ph.D. degree
12 from UCLA.

13 Those are my formal degrees. I can, if
14 you'd like, describe some of the educational
15 experience.

16 Q Did you have any specialty or
17 concentration, special concentration in your master's
18 and/or doctoral work?

19 A Yes.

20 Q What was that?

21 A They are dual.

22 I'm a clinical psychologist and also I
23 specialized in psychopharmacology, and in particular
24 in the study of cigarette smoking.

25 Q Did you specialize in the study of

1 cigarette smoking when you were in school?

2 A In the sense that I did research on it, yes.

3 Q What research did you do on it when you
4 were in school?

5 A I did -- well, let me see if I can enumerate it
6 all.

7 I did research on the tobacco withdrawal
8 syndrome as my master's thesis.

9 I did research on some of the
10 physiological effects of nicotine such as those
11 related to the production of tremor, those related to
12 the effects on the gastrointestinal system.

13 I did research on drugs related to the
14 opiates also in relation to their physiological
15 effects.

16 I did research on cigarette smoking
17 relapse.

18 I'm not sure that's an exhaustive list.

19 Q This is while you were in graduate
20 school?

21 A While I was at UCLA, yes.

22 Not necessarily -- to make it clear, it
23 was not necessarily as part of my -- not in a role as
24 a student. For much of that time I also was
25 functioning as the director of a research program in

1 the department of psychiatry.

2 Q Did you do a dissertation?

3 A Yes, I did.

4 Q What was the dissertation?

5 A The dissertation was on -- not on smoking or
6 addiction, but rather on the training of
7 psychotherapists. So it was more in the traditional
8 mainstream of clinical psychology.

9 Q Do you still have a copy of your master's
10 thesis?

11 A I'm sure I do, yes.

12 Q Was it published?

13 A Yes. It appeared as an article by Shiffman and
14 Jarvik in 1976.

15 Q Is that listed on your bibliography?

16 A Yes.

17 Q Are you a licensed psychologist?

18 A My license is currently, I don't know what you
19 call it, dormant, because my clinical activities are
20 all channeled through the university and, therefore,
21 in the State of Pennsylvania I'm permitted to function
22 as a psychologist in that capacity.

23 Q Have you ever been a licensed
24 psychologist?

25 A Yes.

1 Q Where?

2 A In the State of Florida.

3 Q For how long?

4 A I don't recall. I'd have to look.

5 It would have just been a few years since
6 I only spent a few years in Florida.

7 Q When did you leave Florida?

8 A 1984.

9 Q So since 1984 you have not been a
10 licensed clinical psychologist?

11 A Again, since 1984 I've had my license in
12 suspension but I'm permitted to function as a clinical
13 psychologist through the university.

14 Q What do you mean by that, you're
15 permitted to function as a clinical psychologist
16 through the university?

17 A I mean that all of the kinds of activities that
18 the law permits for a clinical psychologist I'm
19 permitted to do, such as seeing patients, performing
20 treatment, et cetera.

21 Q But you must do that under the tutelage
22 of the university or under the supervision?

23 A Tutelage would be inaccurate.

24 In fact, I am the supervisor and the
25 tutor.

1 Q Okay.

2 A It's an institutional auspices.

3 Q All right.

4 Tell us about your employment since you
5 left UCLA.

6 A Okay. I was employed as a faculty member in
7 the department of psychology at the University of
8 South Florida.

9 During some of that time I also had an
10 appointment in the department of psychiatry and
11 behavioral medicine in the School of Medicine.

12 In 1984 I left there, came to the
13 University of Pittsburgh where I was employed as,
14 initially as an assistant professor.

15 I was then promoted and tenured as an
16 associate professor, and I'm about to be promoted to a
17 full professor.

18 Q I want to go back a minute.

19 You mentioned that you did work in
20 connection with some research institute at UCLA while
21 you were getting your doctorate there. How long were
22 you at UCLA?

23 A I was at UCLA from 1973 to 1981.

24 Q And can you describe your professional
25 activities during that time?

1 A Certainly.

2 Q And educational activities.

3 A Yes. I began -- I began as a child, but no --
4 I began with employment as a research associate in the
5 department of psychiatry to work on -- in the
6 psychopharmacology unit that was studying nicotine and
7 smoking. That employment continued, with some
8 interruptions, for my entire stay there.

9 To make things clear, there are two
10 parallel tracks here. One is employment in the
11 department of psychiatry which resides in the school
12 of medicine, and also at the Veterans Administration
13 Hospital psychopharmacology unit. In parallel with
14 that was my formal student training in the department
15 of psychology at UCLA.

16 So that may help clarify some confusion.

17 So when I came out, I came out not as a
18 student, but as a research associate at the
19 psychopharmacology unit which was associated with the
20 department of psychiatry, School of Medicine, and also
21 with the psychopharmacology unit at the Veterans
22 Administration Hospital Brentwood.

23 In the fall of 1973 I entered the
24 clinical psychology graduate program at UCLA. I
25 believe my master's degree was awarded about a year

1 later.

2 Q Uh-huh.

3 A During -- during that time, in terms of my
4 research on addiction and smoking I participated in a
5 number of projects and was being promoted within the
6 ranks. I don't recall exactly when those promotions
7 took place.

8 In -- I don't remember the years -- in
9 1977 I believe it was, I was awarded a research grant
10 by the National Institute on Drug Abuse to study
11 smoking relapse. So I was the coprincipal
12 investigator on that.

13 Q Who was the other investigator?

14 A Murray Jarvik. Murray Jarvik was the chief of
15 the psychopharmacology unit I have described.

16 During that time I also participated in
17 the drafting of other grants related to the study of
18 drug use and addiction.

19 I'm trying to think what else is
20 relevant. Maybe you can clarify the question.

21 Q What was the grant, the one you got in
22 1977?

23 A I don't recall the title of it. I can -- the
24 work was concerned with the problem of understanding
25 relapse after people quit smoking.

1 It was initially directed at testing some
2 treatments for that, but evolved into more of a study
3 of its causes and correlates.

4 Q And were the results of that research
5 published?

6 A Yes. There have been quite a few publications.
7 Again, I don't think I could list them all.

8 If you have a copy of my CV I can
9 identify them, but there are probably a dozen.

10 Q And they are all on your CV?

11 A I would think so, yeah.

12 Q All right. Did you teach any courses at
13 UCLA?

14 A Yes.

15 Q What courses?

16 A I'm not sure I'm going to be able to recall
17 them all, but I taught a course in abnormal
18 psychology. I taught a course in the psychology of
19 sex roles. I assisted in teaching a course on
20 research methods and statistical analysis.

21 That's all I recall, but I'm not sure
22 that's all I taught. It was quite some time ago.

23 Q Then you moved on to the University of
24 South Florida; is that right?

25 A Correct.

1 Q What was your role when you first got
2 there? What was your position?

3 A I was an assistant professor. And in that
4 capacity I continued to perform research, taught
5 courses at both the graduate and the undergraduate
6 level, and also supervised the clinical work of
7 clinical graduate students.

8 Q What research did you do while you were
9 at the University of South Florida?

10 A Part of it was a continuation of my research on
11 smoking relapse. It took quite some time to analyze
12 the data. So although all the data had been
13 collected, I continued to analyze some of it there.

14 I also initiated research on how -- on
15 problem drinking among college students and how
16 college students try to cope with that.

17 Q Who funded that research?

18 A That was funded internally by the university.

19 Q What other research?

20 A I'm trying to think.

21 Oh, I was involved in a program of
22 research trying to understand eating disorders such as
23 anorexia or bulimia. That was in the department of
24 psychiatry.

25 Q Who funded that?

1 A Since I was not the principal investigator I'm
2 not actually sure. It came from --

3 Q I'm sorry?

4 A Pauline Powers --

5 MR. DARNELL: Mr. Kearney, please don't
6 interrupt the witness as this has been happening.
7 He's talking, you're talking.

8 The court reporter is going to have a
9 problem.

10 Q Could you spell the name of that
11 principal investigator?

12 A Powers, P-o-w-e-r-s.

13 Q And you were involved in that research?
14 What kind of involvement did you have?

15 A I'm going to stand if you don't mind. It will
16 help me think better.

17 I was involved in helping her design the
18 research, think about how to perform the assessments
19 of these patients. I interviewed patients with her.
20 I helped her design a data management system. I
21 reviewed manuscripts that she was working on.

22 Again, there may be -- to be frank,
23 you're asking me about activities of some years ago
24 and there may be other activities I'm forgetting, but
25 that I think captures the gist of it.

1 Q Where is she located right now?

2 A I believe she's at the University of South
3 Florida.

4 Q What courses did you teach at the
5 University of South Florida?

6 A I taught -- again, I'll have to recall.

7 I taught abnormal psychology. I taught
8 introduction to clinical psychology. I taught a
9 graduate course on research methods. I taught a
10 course on clinical psychology, an introduction to the
11 clinical treatment, psychotherapy.

12 Again, I couldn't tell you that that was
13 a complete list.

14 Q Okay. Then you moved on to the
15 University of Pittsburgh; is that right?

16 A Right.

17 Q And that was in 1984?

18 A Correct.

19 Q And can you describe what your position
20 was when you arrived there?

21 A Yes. I had -- I was appointed as an assistant
22 professor. Again, my duties included the performance
23 of research.

24 They also included the supervision -- I
25 should mention -- at South Florida, too, going back,

1 one of my duties was to oversee the clinical training
2 of graduate students who were being trained to be
3 clinical psychologists and psychotherapists.

4 So supervision involved teaching them how
5 to perform treatment, reviewing their treatment plans,
6 actually reviewing videotapes of treatment sessions.
7 In other words, very direct supervision of their
8 clinical work.

9 Similarly at the University of Pittsburgh
10 the supervision of clinical graduate students,
11 including a review of their treatment sessions,
12 treatment plans, et cetera, was part of my duties and
13 still is.

14 Sometime after I arrived, I think it may
15 be two years after I arrived, I was also appointed to
16 be the director of our training clinic.

17 As part of our training of clinical
18 psychology graduate students, we operate a psychology,
19 clinical psychology clinic that treats people from the
20 community. And it's purpose is to train students in
21 psychological treatment.

22 In addition to supervising them as a
23 faculty supervisor, I then became director of the
24 clinic, which involved both administrative oversight
25 and additional duties in the training of those

1 students.

2 I -- in effect, I supervised the
3 supervisors of those students, handled emergency
4 cases, handled questions of who was appropriate for
5 treatment in the clinic, ran the clinic.

6 My teaching duties were primarily focused
7 on graduate teaching. As I've described to you, this
8 kind of clinical teaching.

9 I also taught and continue to teach the
10 introductory -- the major course on treatment methods
11 and also a course on the process of -- of treatment.
12 A big part of my duties in teaching do not involve
13 formal courses that appear on people's transcripts,
14 but rather very close supervision of graduate students
15 who work with me.

16 In fact, I would say that is the major
17 part of my teaching duties.

18 Q Any other formal courses that you teach
19 or have taught in the last five years at the
20 University of Pittsburgh?

21 A I taught -- I also taught introduction to
22 clinical psychology for undergraduates.

23 And I have taught actually at the
24 University of Washington as a visiting faculty member,
25 a course on theories of addiction.

1 Q Is that the only course, formal course
2 you've taught on addiction?

3 MR. DARNELL: Excuse me before you answer
4 that.

5 When you say "formal course," do you mean
6 where that was the title of the course or the course
7 may have not had it as its title but it may have been
8 one of the curricular subjects?

9 Which are you referring to, Mr. Kearney?

10 Q Is that the only course that you have
11 taught in the theories of addiction, Doctor?

12 A I'm still unsure whether you mean courses that
13 have that in the title or courses in which that was
14 part of the content.

15 Q Okay. Give me a list of courses that you
16 taught that had that in the title.

17 A You have that. That is the only one that has
18 it in the title.

19 Q That wasn't unclear to you, was it,
20 Doctor?

21 A Sure it was.

22 MR. KEARNEY: Let's go off the record for
23 a minute, if we can.

24 (Discussion off the record.)

25 MR. KEARNEY: Let's go ahead.

1 Q Now, you gave me the names of all the
2 courses that you've taught in which the theories of
3 addiction were a component of the --

4 A Let me go back.

5 Q Let me finish the question, please.
6 -- of the course.

7 A Sorry. Let me again explain that much of my
8 teaching is not embodied in courses.

9 Q You already explained that and I tried to
10 formulate a question that was designed to take your
11 explanation into account and to drop those --

12 A Okay.

13 Q Drop that type of activity out.

14 A That is much clearer to me then.

15 Q And concentrate on courses where there is
16 a student body standing in front of you.

17 A Correct.

18 Q When you give a course it usually
19 involves people coming into a room at a bell.

20 A Right.

21 Q It involves you talking in front of them
22 or giving out materials, and when the bells rings they
23 leave. That's what I am talking about.

24 A Right. And you want to know?

25 Q What kind of courses like that,

1 Dr. Shiffman, have you taught in which you have taught
2 about the theories of addiction?

3 A So you're not asking about the title of the
4 course, but the content?

5 Q Yes.

6 A Okay. That would include theories of
7 addiction, abnormal psychology, introduction to
8 clinical psychology and processes of psychotherapy.

9 Q Okay.

10 A I should add that another kind of classroom
11 teaching that I do that fits your description is
12 teaching in which there's -- in which I come in and
13 don't teach the whole course, but teach just one or
14 more lectures as a guest expert or specialist.

15 And I'm quite often asked to do that for
16 courses, to talk about addiction and particularly
17 cigarette smoking.

18 Q You do that on a regular basis?

19 A Yes. It's by invitation so I couldn't -- it's
20 not like I do it once a semester. I might sometimes
21 do it many times and I might go a semester without.

22 Q Okay. So we'll call them addiction
23 lectures.

24 A Right.

25 Q All right. So that when I refer to them

1 again you'll know what I mean.

2 A Okay.

3 Q All right?

4 A Sure.

5 Q Now, tell me what texts do you use in
6 your introduction to clinical psychology course?

7 A I'm not sure I'm gonna be able to give you an
8 accurate recall.

9 I believe -- I have used a text, I
10 believe it's by Goldberg, but let me be clear that I'm
11 not sure, on the Introduction to Clinical Psychology.
12 I believe that's the title.

13 And we're talking now, to be clear, about
14 the undergraduate course on introduction to clinical
15 psychology.

16 Q And you think it's a book -- when was the
17 last time you taught that course?

18 A Would have been about probably '85.

19 Q All right. And your best recollection is
20 that it was a book by Goldberg?

21 A Yes.

22 Q Tell me what book do you use or books do
23 you use in your theories of addiction course?

24 A I didn't use a single book. It was really
25 quite -- because that was an advanced graduate course

1 that included people ranging up to post doctoral
2 fellows and senior faculty. The readings were quite
3 diverse and they were collections of articles,
4 chapters from books. There was no one single text.

5 Q Did you -- was that a course that you
6 gave to the students for credit in some respects?

7 A Yes. Uh-huh.

8 Q And that was given under the auspices of
9 the University of Pittsburgh?

10 A University of Washington.

11 Q University of Washington?

12 A Yes.

13 Q When were you there?

14 A I was there this last spring. Spring of 1990.

15 Q You were there for one semester?

16 A Correct.

17 Q Can you just tell me what, if you can
18 recall, tell me what articles form the basis of this
19 course, or what articles did you use in teaching that
20 course?

21 A There were so many I genuinely could not begin
22 to recall them.

23 Quite literally the reading would
24 probably be three-quarters of a foot high.

25 Q All right. What book did you use in your

1 abnormal psychology course in the last five years?

2 A I have used several.

3 The one I most recently recall is by
4 Coleman and other authors. Coleman is the first
5 author. There's some others whose names I don't
6 recall as well.

7 I think it's Coleman, Butcher and
8 Beutler. Something like that. But it's called
9 "Abnormal Psychology."

10 Q And you talked about a course. I don't
11 know if I got it down right, processes of --

12 A Psychotherapy.

13 Q -- psychotherapy, I think.

14 A Correct. Again.

15 Q What text do you use in that course?

16 A Again, it's quite typical of advanced graduate
17 courses that I would not select a single text but a
18 collection of readings. And, again, the readings are
19 so extensive that I could not begin to recall.

20 Q Do you view that there is one or two
21 authorities on the subject of the processes of
22 psychotherapy?

23 A Actually, I think there are many authorities.

24 Q All right. Are there any leading
25 authorities or primary authorities?

1 A I -- in all honesty -- in all honesty, I'm not
2 sure what you mean by an authority because that's not
3 the way academics --

4 Q Let's do it this way: Do you recall any
5 books that you referred to your students, referred
6 your students to in that course?

7 A In fact, I don't. Because, again, the readings
8 tend not to be whole books, they tend to be articles
9 on a particular point.

10 Q Now, in these addiction lectures --

11 A Uh-huh.

12 Q -- do you refer your students in those
13 lectures to any authorities?

14 A I give them readings, if that's what you mean.

15 Q Yup. That's what I mean.

16 Can you tell us what readings you give
17 them?

18 A It would depend. It's very variable. It would
19 depend very heavily on what -- what the class was --
20 what I saw as the central theme of the lecture.

21 Very often I would assign them to read
22 some of my own writings. That would be quite typical.

23 Q Okay. If the course was relating to
24 addiction and cigarette smoking, do you know of any
25 writings that you would refer those students to?

1 A Yes. Yes.

2 Q Other than your own writings?

3 A I often use the Surgeon General's report as a
4 source.

5 Q That's the Surgeon General's record
6 entitled, "Nicotine Addiction"?

7 A Addiction.

8 Q Labeled 1988?

9 A Right. And I have also used, the 1979 report
10 has a lot of relevant text.

11 Q Anything else?

12 A Again, there are -- there may be a lot of other
13 articles that I assign but --

14 Q But you can't recall any of them now, any
15 of the authors?

16 A There are just too many, sir.

17 Q Okay. Who do you recognize, sir, as an
18 expert in the field of addiction?

19 A I would see Jack Henningfield as an expert.
20 Jerome Jaffe is recognized as an expert. Michael
21 Russell.

22 I'd say those are the primary experts.

23 Q Would you consider Neil Benowitz an
24 expert?

25 A Yes. On the pharmacology specifically. Again,

1 expertise is usually rather specific.

2 Q What is your specific expertise?

3 A My expertise is rather broader than most, so my
4 expertise is on biobehavioral models of addiction.
5 That is, I try to integrate both biological and
6 behavioral factors independent and addiction.

7 Q Whereas you say Benowitz is --

8 A And I further focus on the treatment of
9 addictions.

10 Q Would you recognize any other person
11 other than yourself as -- and if so, can you tell me
12 the name of the person -- as an expert in the
13 biobehavioral models of addiction?

14 A I guess I'm not -- I can't think of anyone.

15 Q So as far as you know, right now you are
16 the most expert person in the entire world and there
17 is no other expert that you even recognize in the
18 entire world on the subject of the biobehavioral
19 models of addiction; is that your opinion?

20 A Are you asking whether the particular balance
21 of expertise and background is unique or -- like I
22 said, I'm not clear.

23 Q I'm asking you this: Is it your opinion
24 that you are the only person you recognize as an
25 expert in the area of biobehavioral models of

1 addiction?

2 A No.

3 Q Name the others.

4 A I think Michael Russell would be one, as I
5 mentioned. Jack Henningfield would be another.
6 Ovid Pomerleau is.

7 Q Anybody else?

8 A Again, I couldn't -- no one comes to mind.

9 Q That's --

7
10 A That's not to say --

11 Q John Hughes?

12 A His expertise is rather different.

13 Q Do you recognize that he's got expertise
14 in this area at all?

15 A Which is this area?

16 Q In the area of addiction.

17 A Yes. He does have expertise in that area.

18 Q What would be, in your opinion, his
19 expertise in the area of addiction?

20 A Primarily behavioral pharmacology.

21 Q What is the difference between
22 biobehavioral models and behavioral pharmacology?

23 A Behavioral pharmacology is a much more narrow
24 discipline arising out of animal -- experiments with
25 animals on the response to drugs.

1 Some of those methods also get applied to
2 humans, but it's not the same as taking into account
3 broader behavioral principles.

4 Q Why is it not the same? Explain to us
5 why it's not the same.

6 A A behavioral pharmacologist would tend to
7 restrict himself to a few paradigms or ways of
8 approaching a problem that don't take into account
9 many aspects of behavior such as effect or cognition.

10 Again, in effect the field
11 methodologically treats, whether it be people or
12 animals, in much the same way and that --

13 Q And that doesn't work?

14 A I'm not saying it doesn't work. I'm saying
15 it's a narrow viewpoint.

16 Q Because animals are different from men,
17 humans?

18 A In some respects.

19 Q In respect to effect and cognition, among
20 others; correct?

21 A I would say that human beings have more
22 complicated cognitions.

23 Q It's a different biological system?

24 A No, no. On the contrary.

25 With regard to some of the biological

1 aspects our similarities are stronger.

2 Q What about -- have you heard -- ever
3 heard of Lynn Kozlowski?

4 A Yes.

5 Q Do you consider him in any respects an
6 expert in the field of addiction and cigarette smoking
7 behavior?

8 A No, I don't.

9 Q Excuse me?

10 A No, I don't.

11 Q What is his -- you said you are familiar
12 with his name. Is he an expert in any field?

13 A I've met him. I have read some of the things
14 he has published. I don't consider him an expert.

15 Q Do you disagree with things he has
16 published?

17 A I cannot even claim to have read everything
18 he's published, so it's hard to say.

19 I disagree with some -- mostly I don't
20 find them very important.

21 Q Why is it that you would not consider
22 him -- well, let me withdraw that.

23 You have read some things Kozlowski has
24 written?

25 A Correct.

1 Q Do I assume correctly that you don't
2 agree with some of the things you have read that he
3 has written?

4 A To be frank, that's not the basis -- that may
5 be true. I would have to think about that.

6 That's not the basis for my suggesting he
7 is not an expert.

8 Q Okay. Could you explain for us the basis
9 for you suggesting that he's not an expert?

10 A Yes. My -- from what I have read of what he's
11 written, it doesn't seem to me to be very relevant or
12 important. And I don't -- I don't see him as having
13 made a major contribution to the area.

14 Q Other than the Surgeon General's report
15 labeled "Nicotine Addiction," are there any other
16 authoritative works on addiction and smoking behavior
17 that you are aware of?

18 A Can you explain to me again your idea of what
19 an authoritative work is?

20 Q Have you ever heard the term
21 "authoritative work" used in your professional
22 experiences?

23 A It just isn't how, how people talk about each
24 other's work so --

25 Q But you've heard it before?

1 A I've actually heard it, read it more in
2 depositions than I have heard it in academic contexts.

3 So I really -- I want to be responsive.
4 I want to be sure that I'm responding to what you mean
5 and not to some other version.

6 Q Absolutely fair.

7 Authoritative work, by that I mean a work
8 on which professionals in your field customarily would
9 rely upon in the course of the conduct of their
10 professional activities. That could include clinical
11 work, research and teaching.

12 A And rely upon means consult?

13 Q Yes.

14 A Agree with?

15 Q That they would consult.

16 A Okay. And you understand that in my field one
17 might consult things one doesn't agree with.

18 Q We'll get to that next.

19 A Okay. In fact, it's our job not to agree with
20 things.

21 Q It's my job, too.

22 A Let's see. I would say perhaps it would be
23 helpful if I said there are particular journals that
24 are more respected than others.

25 Q No. I'm looking now for texts. Texts

1 that are respected as authoritative sources in the
2 field of addiction and smoking behavior.

3 A Uh-huh.

4 Q Other than the Surgeon General's report.

5 A Right. I just can't think of any that I would
6 want to endorse in that way, because they're often of
7 quite mixed quality.

8 Q Would you say there are a lot of
9 different views about the nature of this phenomenon
10 which I understand you call cigarette smoking
11 addiction or dependence?

12 A There are -- there's actually a pretty good
13 consensus regarding it at the moment in the scientific
14 community.

15 Q There isn't very much controversy about
16 it in your view?

17 A There's some. I would say quite minor.

18 Q But notwithstanding that, you can't tell
19 us any text that you would consider to be
20 authoritative on addiction and cigarette smoking
21 behavior?

22 A Well, I've given you a couple but it's just not
23 the way I think of things. I'm just --

24 Q Okay. Let's talk a little about your
25 research.

1 You mention that when you moved to the
2 University of South Florida you continued to analyze
3 data on your relapse research?

4 A Correct.

5 Q Can you describe the relapse research and
6 the data that you are analyzing at the University of
7 South Florida?

8 A Certainly.

9 ***** MR. KEARNEY: Off the record.

10 (Discussion off the record.)

11 (Recess.)

12 (Notes of R. Cipollone's trial made by
13 Dr. Shiffman are received and marked as Exhibit
14 Shiffman-1 for Identification.)

15 (Notes of R. Cipollone's relatives'
16 depositions made by Dr. Shiffman are received and
17 marked as Exhibit Shiffman-2 for Identification.)

18 (Notes of R. Cipollone's deposition made
19 by Dr. Shiffman are received and marked as Exhibit
20 Shiffman-3 for Identification.)

21 (Notes of the deposition of Dr. Jaffe
22 made by Dr. Shiffman are received and marked as
23 Exhibit Shiffman-4 for Identification.)

24 (Document entitled "ICD-9 WHO 1978," made
25 by Dr. Shiffman is received and marked as Exhibit

1 Shiffman-5 for Identification.)

2 (Notes of Surgeon General's report made
3 by Dr. Shiffman are received and marked as Exhibit
4 Shiffman-6 for Identification.)

5 (Document entitled "Strategic Summary of
6 Tobacco Company Documents," made by Dr. Shiffman is
7 received and marked as Exhibit Shiffman-7 for
8 Identification.)

9 (Document entitled "Addiction" is
10 received and marked as Exhibit Shiffman-8 for
11 Identification.)

12 (Letter dated 3/4/91, Darnell to Kearney
13 with attached CV of Saul Shiffman received and marked
14 as Defendant's Exhibit Shiffman-9 for Identification.)

15 MR. KEARNEY: Can we have that last
16 question read back?

17 (Question read back as follows: "Can you
18 describe the relapse research and the data that you
19 are analyzing at the University of South Florida?")

20 BY MR. KEARNEY:

21 Q Okay. I'm going to -- Dr. Shiffman, with
22 respect to your clinical practice today --

23 A You don't want me to answer that question?

24 Q No.

25 A Okay.

1 Q You did answer it. You said certainly.
2 With respect to your clinical practice
3 today, am I correct that you see no private
4 patients --

5 A That is correct.

6 Q -- that are patients just of yours that
7 you bill?

8 A That is correct. I supervise the treatment of
9 patients through students and through supervision of
10 trainers and people who provide treatment both for
11 general clinical problems as well as for smoking
12 related problems.

13 Q Do you have any administrative
14 responsibilities?

15 A Yes, I do.

16 Q Could you describe your administrative
17 responsibilities?

18 A As I say, in relation to the clinic, I am the
19 administrator for the clinic, so that means arranging
20 for other faculty supervisors; setting policies for
21 them; arranging for students to be assigned to cases;
22 deciding what kinds of cases we will accept; arranging
23 for the evaluation of students' performance; arranging
24 for the evaluation of supervisors' performance;
25 assigning grades; you know, making sure records are --

1 clinical records are kept up to date. That's in
2 relation to the clinic.

3 In relation to my own research program
4 administering bu -- research grant budgets;
5 supervising personnel; arranging for the orderly
6 function of our office; hiring and evaluating
7 employees; arranging for data management; getting us
8 appropriate space in facilities, et cetera.

9 And then in relation to -- I have some
10 administrative responsibilities in relation to a
11 smoking cessation program that is administered now
12 primarily by The American Cancer Society, but was
13 initially a joint project between the University of
14 Pittsburgh and The American Cancer Society.

15 Q And what are your administrative
16 responsibilities in connection with the smoking
17 cessation program?

18 A Again, administratively I set broad policies
19 regarding the selection and training of personnel to
20 administer treatment; I think about how to keep our
21 records; I may serve as a liaison with The American
22 Cancer Society to smooth relationships between the two
23 institutions.

24 I'm sure there are things I'm not
25 thinking of but that --

1 Q And you had been -- the smoking cessation
2 program has been in existence since when, sir?

3 A May I consult my resume because --

4 Q Sure.

5 A It's been going on so long. It seems like
6 forever.

7 I don't have a copy here.

8 MR. DARNELL: Do you have a copy with
9 you?

10 MR. KEARNEY: I may have a copy with me.
11 Well, I'm -- we can do that during the break if you
12 like.

13 Q You can't answer that question, though,
14 without consulting your CV?

15 A I basically don't want to give an inaccurate
16 answer.

17 Q I agree, and I don't want an inaccurate
18 answer.

19 A I would say it's several years.

20 Q Several years. That's fine.

21 And you have had those administrative
22 responsibilities since the program began?

23 A As a matter of fact, I created the program,
24 yes.

25 Q The answer is yes?

1 A Yes.

2 Q And how long have you had the
3 administrative responsibilities that you talked to us
4 about in connection with your research program? How
5 long have you been doing that?

6 A Since I came to the University of Pittsburgh.

7 Q 1984?

8 A Correct.

9 Q And you described some administrative
10 responsibilities that you had for the psychology
11 clinic --

12 A Right.

13 Q -- at the University of Pittsburgh?

14 A Right.

15 Q And you've had those responsibilities
16 since 1984?

17 A No. I believe that was since 1986. But,
18 again, it's -- it's a long time.

19 Q All right. About how much of your time
20 since 1986 is spent in the administrative functions
21 that you've just discussed in those three areas; the
22 psychology clinic, the research program and the
23 smoking cessation program?

24 A That would be very hard to say for two reasons.
25 One is that it is enormously variable.

1 So for example, at the beginning and end of semesters
2 my duties as clinic director become more pressing and
3 more demanding.

4 The other is that while I've described
5 things to you as administrative functions in all of
6 those roles, they are rather integrated with clinical
7 and teaching functions.

8 And so if you're -- well, maybe I should
9 ask whether the focus of your question means to
10 distinguish administrative from research and clinical
11 and teaching functions?

12 Q It does.

13 A Okay. As I say, it's very variable.

14 Q In a year can you give us an estimate?

15 A I'll try to do it for you in a week or a month.

16 Purely administrative it hovers around
17 four hours a week, if I tried to separate out teaching
18 clinical and research functions.

19 Q Is there anyone in the clinical
20 psychology area at the University of Pittsburgh who
21 has a license from the State of Pennsylvania to
22 practice clinical psychology?

23 A There are some, yes.

24 Q Is that a requirement of the university
25 that they've got some license as psychologists?

1 A No, it's not. And, in fact, several faculty
2 don't have -- haven't activated Pennsylvania licenses
3 for the same reason.

4 Let me just make something clear so that
5 it is clear to you. I've met all the requirements for
6 licensure in Pennsylvania. I simply haven't filed the
7 paperwork because it hasn't -- it doesn't produce any
8 advantage for me so long as my clinical activities are
9 in the context of my university employment.

10 Q Do you today have primary care
11 responsibility for any patients?

12 A I don't know what you mean by primary.

13 Q You're their doctor.

14 A Yes.

15 Q How many?

16 A I'm responsible for all the patients in the
17 clinic, which is -- varies, but let's say 20.

18 Q Twenty?

19 A Yeah.

20 Q And that number of patients, although it
21 varies somewhat, it's pretty much 20 -- how do I put
22 this?

23 At any given time the clinic is serving
24 approximately 20 patients; is that right?

25 A It varies -- yes.

1 And, again, to make that clear, I have
2 responsibility because I'm clinic director. I may not
3 necessarily meet these patients. I may never meet
4 them. They may come and be treated and be cured, and
5 go off to live happily ever after and I will never
6 meet them.

7 I have the primary responsibility in the
8 sense, for example, that if an emergency occurs I'm
9 gonna be -- I'm the person who is likely to be called
10 in to attend to it and so on.

11 Q I guess then I asked the wrong question.

12 I'm asking this question: Today how many
13 patients look to you, sir, as being their, their
14 doctor to diagnose them, to treat them, to take care
15 of them?

16 A Come and meet with me and so on, is that the
17 question?

18 Q My question was, how many view you as
19 their doctor?

20 A I'm not sure I can say who views me as their
21 doctor.

22 Q Have you ever treated anybody for heroin
23 abuse?

24 A No.

25 Q Have you ever treated anybody for cocaine

1 abuse?

2 A No.

3 Q Have you ever treated anybody for abuse
4 of marijuana?

5 A Yes.

6 Q Have you ever treated anybody for
7 alcoholism or alcohol abuse?

8 A I have treated, yes. I've treated patients in
9 whom that was a problem.

10 Q Were those patients people that came to
11 you, Doctor, for treatment for alcoholism?

12 A I'd say they were being treated for alcoholism.

13 Q I beg your pardon. I didn't catch the
14 beginning of that answer.

15 A Let's say they were being treated for
16 alcoholism.

17 Q Was that their primary complaint?

18 A Are you asking what they thought their problem
19 was or what the medical and psychological care givers
20 staff thought was a problem?

21 Q Let's do the latter.

22 A Okay. They were being treated for alcohol
23 problems because the staff thought that that was a
24 problem for them.

25 Q All right. But we're now talking about

1 people whom you have treated?

2 A Correct.

3 Q Have you treated anybody for abuse of
4 amphetamines?

5 A No. I believe not.

6 Q Have you treated anybody for abuse of
7 barbiturates?

8 A I believe not.

9 Q In what setting did you have occasion to
10 treat people for or a patient for marijuana abuse?

11 A It would have been at the -- actually the one I
12 remember is at the Veterans Administration Hospital.

13 Q And that was when you were in Los
14 Angeles?

15 A Correct.

16 Q And that would have been -- you left L.A.
17 in 1981; correct?

18 A Correct.

19 Q So it would be sometime prior to 1981?

20 A Correct.

21 Q How many people did you treat for
22 marijuana abuse?

23 A I believe there were three in a --

24 Q And that was before you became a licensed
25 psychologist?

1 A Correct.

2 Q Licensed to practice psychology?

3 A Correct.

4 Q And, therefore, I assume you did that
5 under the supervision of some licensed psychologist?

6 A Right.

7 Q What was his name?

8 A As part of my training.

9 Q What was his name or her name?

10 A I don't recall who my supervisor was.

11 I've had literally dozens of supervisors
12 so I -- I couldn't tell you which supervisor was in
13 charge of those cases.

14 Q Now, were these people that came to you
15 as -- with the primary complaint that they were
16 marijuana abusers?

17 A They often came in because of other complaints,
18 but as I explained, it was judged by the professional
19 staff that marijuana abuse was either contributory or
20 may even have been a major problem for them.

21 Q And they were treated for marijuana
22 abuse?

23 A Correct.

24 Q And they were diagnosed and treated by
25 the professional staff?

1 By that I mean not you singularly, but
2 you along with the professional staff who were
3 training you at the time to become a psychologist?

4 A What do you mean by me singularly?

5 Q By that I mean that you cared for these
6 people in conjunction with those folks at UCLA who
7 were training you to become a psychologist. You
8 didn't do it alone.

9 A That's right.

10 Q You mention that you treated people for
11 alcoholism. In what context or setting was that, sir?

12 A That would have been in two contexts.

13 One, again at the V.A., and the other
14 when I was in private practice in Tampa, Florida.

15 Q Now, when you say "again at the V.A.,"
16 that's in L.A. before 1981?

17 A Correct. Uh-huh.

18 Q And it was before you became a licensed
19 psychologist?

20 A Uh-huh.

21 Q And it was in connection with your
22 training to become a psychologist?

23 A Uh-huh.

24 Q And how many were there, sir?

25 A I'd say at least half a dozen. I can't

1 remember them.

2 Q And who was your supervisor, or was the
3 licensed psychologist who worked with you in treating
4 these people?

5 A Again, I had so many that I couldn't
6 accurately -- I don't think that I could accurately
7 even list all my supervisors, much less tell you which
8 ones were involved in these cases.

9 Q Can you name one supervisor that you had
10 in this period of time?

11 A Let me think.

12 Q By this period of time I mean when you
13 treated these half dozen people for alcoholism.

14 A I think her name was Evelyn Crumpton.

15 Q Could you spell that?

16 A C-r-u-m-p-t-o-n. I hope I've got that right.

17 Q And she was a licensed psychologist?

18 A Correct.

19 Q And she practiced in the L.A. area?

20 A She was at the Veterans Administration
21 Hospital.

22 Q Have you had any contact with her
23 recently?

24 A No.

25 Q Do you know if she's still there?

1 A I have no idea.

2 Q Can you name anybody else?

3 A It really fades into memory, and I don't want
4 to give you an inaccurate response.

5 Q We do not want inaccurate responses,
6 neither Mr. Darnell nor I. We don't want you to
7 speculate.

8 You mention that you treated --
9 withdrawn.

10 I must have missed your private practice
11 in Tampa. Can you tell me, when did you start your
12 private practice in Tampa?

13 A It was soon after I arrived. Let me see.

14 I would estimate within a year of my
15 arrival.

16 Q So that would be 1985 approximately?

17 A Correct.

18 Q And where was your office located?

19 A In a professional building near the campus.

20 Q Do you remember the address?

21 A I don't.

22 Q Were you practicing on your own or in
23 concert with somebody else?

24 A In concert with somebody else.

25 Q Who?

1 A It's funny. I can see his face and I cannot
2 grasp his name.

3 Q How long did you practice with him?

4 A For a couple of years.

5 But we were not -- that didn't mean that
6 we had all that much interaction.

7 Some of the arrangement involved my
8 having use of his office so that I didn't have to rent
9 an office and so on. So --

10 Q Was your name on the door?

11 A You know, I don't remember.

12 Q Did you have a telephone number which
13 people could reach you?

14 A Yes.

15 Q Was the telephone number listed in your
16 name?

17 A Yes.

18 Q How long a period of time did this
19 private practice last?

20 A Until I left Tampa.

21 Q Which was when?

22 A 1984.

23 Q I think we might have had a little
24 misdirection by me here. So therefore --

25 A Backwards you had.

1 Q I had your practice down in '85.

2 A It was very short. From '85 to '84.

3 Q From '85 to '84, I don't doubt it.

4 No. The practice must have been
5 something like '82 to '84, right?

6 A Right. I'm saying '82 at the latest. I don't
7 really recall.

8 I said about starting a practice soon as
9 I arrived. When exactly my phone was listed with
10 them, et cetera, I couldn't honestly recall.

11 Q How much time did you spend in your
12 private practice when you were down in Tampa?

13 You know what I mean by that? How much
14 of your professional time?

15 A Yes. It varied. Let's say about four hours a
16 week.

17 Q Four?

18 A Uh-huh.

19 Q Did you share responsibility, patient
20 care responsibility with this gentleman whose name you
21 don't remember, or did you have your own individual
22 patients?

23 A I'm remembering his name. Saunders,
24 S-a-u-n-d-e-r-s.

25 Q Is he still, to your knowledge, in the

1 Tampa area?

2 A I believe he is, but I don't know. I haven't
3 kept up with him.

4 Q Was he a full-time clinical psychologist?

5 A I'm not sure what you mean by that. I'm a
6 full-time --

7 Q Pardon me?

8 A I'm a full-time clinical psychologist.

9 Q I don't know what a full-time clinical
10 psychologist means, I guess.

11 I thought you said you worked four hours
12 a weekend?

13 A A clinical psychologist does things other
14 than --

15 Q Treat people?

16 A Treat people directly.

17 Q Were you a member of the American
18 Psychological Association's local chapter in Tampa
19 when you were down there?

20 A The American Psychological Association doesn't
21 primarily operate by local chapters.

22 Q Were you a member of the American
23 Psychological Association?

24 A Yes.

25 Q Were you a member of any sections of that

1 group?

2 A Yes. Which ones I was a member of then, I
3 would have trouble recalling.

4 Q Okay.

5 A I can tell you which ones I'm now a member of
6 if that would be helpful.

7 Division -- they're called divisions.
8 And Division 28 is psychopharmacology and it's my
9 primary affiliation.

10 Division 38 is the division of health
11 psychology. It's concerned with behaviors that affect
12 health, and that includes cigarette smoking.

13 I was a member, but I believe have since
14 dropped my membership, in Division 12 which is
15 clinical psychology, and Division 29 which is
16 psychotherapy.

17 Q Now, was this practice that you had, was
18 it open for two years or was it open -- how many years
19 did you have it open?

20 A I think I've already told you that I'm not sure
21 exactly when it started. It was two to three years
22 I'd say.

23 Q Two to three years?

24 A Yeah.

25 Q I guess the issue is when in '84 did you

1 go to Pittsburgh?

2 A Oh, all this would have happened on a -- on an
3 academic calendar year basis, so it would have been
4 summer to fall of '84 that I left.

5 And the -- I would have made moves to
6 start my clinical practice soon after arriving in the
7 fall of '81.

8 Q Okay. So you'd say you were open from
9 '82 to '83 and open half of '84?

10 A Run that by me again.

11 Q So you say that your clinical practice
12 was open, you were open for business calendar year
13 '82?

14 A Uh-huh.

15 Q Probably the whole part of the --

16 A I think so but --

17 Q -- calendar year '83?

18 A Right.

19 Q And part of '84?

20 A That sounds right.

21 Q Did you share billing --

22 A No.

23 Q -- with Dr. Saunders?

24 A No.

25 Q You did your billing separately?

1 A Right.

2 Q What about patient records? Was that
3 done together?

4 A Again, no.

5 Q What about referral of patients?

6 A He -- actually what I recall is that he told me
7 he intended to refer patients to me, but that never
8 really materialized.

9 Q What was his first name?

10 A Alan. A nice name.

11 Q Okay. Now tell me -- you mention that
12 you treated patients for alcoholism in connection with
13 this practice.

14 How many?

15 A I believe in that practice it was one.

16 Q For how long did you treat that person?

17 A I don't honestly recall.

18 Q Was that person's primary complaint
19 alcoholism?

20 A Can you clarify what you mean by primary
21 complaint? Because that is not a simple concept.

22 Q All right. When that person presented
23 themselves to you or himself or herself to you, did
24 she say that her complaint -- did she say to you that
25 I'm drinking too much?

1 A I'm gonna back up again and say that it's --
2 it's common and indeed expected that what a
3 professional considers is a primary complaint isn't
4 what the patient comes in and presents with.

5 So if the patient comes in and has all
6 sorts of other problems and it is very clear that
7 they're due to the person's problem drinking, then I
8 would consider that to be the primary complaint even
9 though they're not saying that that's what they want
10 help with.

11 Q Okay. Fine.

12 So I understand it, with respect to this
13 patient you considered that patient's primary
14 complaint to be alcoholism?

15 A I did, yes.

16 Q Fine. Did you refer that person to a
17 detox program?

18 A At the time that he came to me he was not
19 drinking enough to warrant that, so I treated him on
20 an outpatient basis.

21 Q Did you refer that person to Alcoholics
22 Anonymous?

23 A No.

24 Q Did you refer that person to any Tampa
25 area alcohol treatment program?

1 A He had already -- as I recall, and I don't
2 remember the details, I think he had already been in
3 one, but I don't remember for sure. It was a long
4 time ago.

5 Q Do I get the sense then that he had been
6 treated for alcoholism by -- by somebody else or --
7 and in some other program?

8 A I believe that he had but I -- I don't want to
9 get into stating things with any more certainty than I
10 have.

11 Q Absolutely.

12 Let me ask you this question: While you
13 were treating him was he also getting treatment for
14 his alcoholism by anybody else or in any other
15 program?

16 A My recollection is that he was not.

17 Q How long did you treat him for?

18 A You asked me and I said that I couldn't recall
19 exactly.

20 Q Was your treatment successful?

21 A I believe that it was, yeah.

22 Q Do you believe that people who are
23 alcoholics can quit, can stop drinking?

24 A Is it physically possible; is that what you
25 mean?

1 Q Yes. Is it physically possible?

2 A Has it been done, yes.

3 Q It's not impossible to quit the use of
4 alcohol by an alcoholic?

5 A That is correct.

6 Q All right.

7 A Let me make it clear. There are people who
8 have received a diagnosis of alcoholism and have
9 subsequently stopped drinking.

10 Q What was your primary mode of
11 treatment -- let me go back. I'm sorry.

12 I have to ask, was your treatment
13 successful of this person?

14 A I believe that it was. But since -- since a
15 judgment of that requires longer follow-up than I was
16 able to do, I don't think I'm in a position to say.

17 Q But while you were treating him you
18 considered it a successful cessation from drinking?

19 A He didn't -- I wouldn't say he completely
20 stopped drinking during the entire time he was in
21 treatment with me.

22 Q So it wasn't successful?

23 A No. It was heading toward being successful
24 and, in fact, there were times that he stopped.

25 Q How did you -- what was your primary

1 treatment vehicle for this person to get him to stop
2 drinking?

3 A There were multiple modalities. It included --
4 I also, as I recall, worked with his wife. So I
5 involved her in his treatment.

6 We worked on analyzing his patterns of
7 drinking, closely examining his -- the consequences of
8 drinking for him, trying to redesign his life, if you
9 will, to make it less likely that he would drink.

10 We worked on analyzing his urges and
11 cravings to drink.

12 Q When you say that -- I don't want to
13 interrupt you and pardon me -- but when you say that
14 you mean you worked on it with him, not with the wife?
15 You discussed with him --

16 A Correct.

17 Q -- his urges and cravings?

18 A Correct.

19 I wouldn't exclude that I may have had
20 discussed them with her as well.

21 Q Okay. Is that it?

22 A Yes.

23 Q You mention that you have treated abusers
24 of amphetamines. In what context did you do that?

25 A As I recall, again, that was at the Veterans

1 Administration Hospital.

2 Q All right. So again, that was when you
3 were at UCLA in training to become a psychologist and
4 before you were licensed as a psychologist?

5 A That is correct.

6 Q And before you got your Ph.D. in
7 psychology?

8 A That's correct.

9 Q Had you gotten your master's at that
10 time, at the time you were doing this treatment?

11 A Yes.

12 Q How many were there?

13 A For amphetamines I think it was only one.

14 Q Do you recall who was your supervisor
15 during that treatment?

16 A The same answer, it's --

17 Q Do you recall whether or not you were the
18 only person who saw this patient in treatment, or was
19 there some other human being that saw that person with
20 you?

21 A I don't recall, but it would -- in terms of
22 treatment at the Veterans Administration, it's very
23 likely he would have been under the care of others as
24 well.

25 Q Okay. You mention that you treated

1 people for barbiturate abuse. In what context was
2 that, sir?

3 A Veterans Administration.

4 Q And how many?

5 A You know, I cannot recall.

6 Q Can you recall whether it was one or more
7 than one?

8 A It may even have been one, but I can't recall.

9 Q So you're not really sure whether you
10 treated anybody for barbiturate abuse?

11 A No, I didn't say that.

12 I said that it may have been more than
13 one but it was at least one.

14 Q Okay. I'm sorry. I thought you said it
15 may not have been one.

16 A No.

17 Q Okay.

18 A Less than one patient is hard to treat.

19 Q Yes:

20 When you mentioned you treated one person
21 for barbiturates and one for amphetamines, about a
22 half a dozen for alcohol and three for marijuana in
23 the V.A., were any of these people the same people?

24 A No.

25 Q One person had all of these different

1 complaints?

2 A No.

3 Q They're all separate instances of
4 treatment?

5 A I believe so.

6 Q Okay.

7 A Again, by way of context it was some years ago,
8 but I don't believe they were the same.

9 Q Okay. When you were at the V.A. --

10 A Uh-huh.

11 Q -- and working towards your doctorate at
12 UCLA, did you treat anybody for tobacco dependence?

13 A At the V.A.

14 Things get complicated here because
15 during the period I was at the V.A. I was at the --
16 well, let me make it simple; yes.

17 Q How many?

18 A I would say about -- this is a round number --
19 100.

20 Q And this is in the period that you were
21 in your doctoral program?

22 A Yes.

23 Q Prior to 1981?

24 A Correct.

25 Q You treated -- and who supervised you in

1 the treatment of those people?

2 A I was, in fact, supervising others in the
3 treatment of those people, most of that time.

4 Q And this was before you were licensed to
5 practice?

6 A That's right.

7 Q And before you got your doctorate, right?

8 A You ought to know that it is very common for
9 treatment of tobacco dependence to be performed by
10 people with -- who are not licensed as clinical
11 psychologists.

12 Q Is it common for people to treat
13 alcoholics, for unlicensed psychologists to treat
14 alcoholics?

15 A In training it's very common and -- as a matter
16 of fact, outside of training it's common.

17 Q In training they do it with supervision;
18 correct?

19 A Typically, yeah.

20 Q Now, I'm a little unclear.

21 You said that you treated 100 people for
22 tobacco dependency?

23 A Uh-huh.

24 Q Prior to 1981?

25 A Correct.

1 Q In what context was that treatment given?

2 A There were multiple contexts.

3 One context was that we conducted group
4 treatment for people who were both patients and
5 employees of the Veterans Administration who needed
6 treatment for smoking or for nicotine dependence.
7 That was one context.

8 The second context was our provision of
9 counseling through -- actually there are more than
10 three. Our provision of counseling to and treatment
11 to community people who were trying to stop smoking.

12 A third context was our provision of
13 treatment and counseling through -- telephone
14 counseling through a counseling service that we
15 offered to the community. So it was telephone
16 counseling.

17 And then the fourth context was through
18 my supervised -- I was also in fully supervised
19 private practice while in L.A.

20 Q Is that it?

21 A I believe so.

22 Q When you say "supervised private
23 practice," somebody supervised you in your private
24 practice?

25 A Correct. Because I -- in that context the fact

1 that I was not yet licensed mattered.

2 Q Where did you have your private practice
3 in L.A.?

4 A I don't recall the address. It was Santa
5 Monica Boulevard somewhere.

6 Q Did you have your own office or did you
7 share an office?

8 A I shared an office.

9 Q Who did you share it with?

10 A I believe his name was Jeffrey Hutter,
11 H-u-t-t-e-r.

12 Q Where is he located now; do you know?

13 A I don't, but I would expect he's probably still
14 there.

15 Q Was he a licensed psychologist?

16 A Yes.

17 Q And you were working in his office?

18 A Correct.

19 Q And he was supervising you?

20 A Correct.

21 Q How long were you doing that for, sir?

22 A I think that would have been about three years.

23 Q Three years.

24 Did you have your own patients or did you
25 just work with him on his patients?

1 A I had my own patients.

2 Q You had separate billing and whatnot?

3 A No. Billing was through him, but they were my
4 patients in the sense that, to use your phrase, they
5 saw me as their doctor. I was -- I met with them,
6 Dr. Hutter did not.

7 Q Okay. How many people did you treat for
8 tobacco dependence in that context, the supervised
9 private practice with Dr. Hutter?

10 A I think it was just a couple. It was a small
11 number.

12 Q Two?

13 A I'd say two.

14 Q So these were people who came and paid
15 you for your services to help them stop smoking; is
16 that right?

17 A That's right.

18 Q Were you successful?

19 A Yes.

20 Q How did you go about doing it?

21 A Well, it was very intensive. We met at least
22 for an hour a week.

23 At the time I was using a procedure
24 called rapid smoking, which you may be familiar with.
25 It involves smoking cigarettes as fast as you can till

14 1 they make you sick.

2 The idea was to make smoking aversive and
3 come to have aversive or unpleasant or punishing
4 connotations.

5 You know, come to think of it, I think I
6 was not always successful. I'd like to think that I
7 was. And --

8 Q We're just talking about the two?

9 A Those two, right. Right.

10 Q So you were not successful or you were
11 successful?

12 A I think it's really half and half. It's really
13 hard to remember individual patients.

14 And as in the treatment of problem
15 drinking, we would have reviewed the circumstances of
16 the person's smoking, their smoking history, their
17 associations with smoking. We would have tried to
18 make changes in their life to make smoking less
19 likely, or to make urges and cravings less likely.

20 And again, the -- the rapid smoking
21 treatment would have been part of that strategy.

22 Q When you say "we," you did this by
23 yourself though, right?

24 A Oh, I was counting the patients as a
25 collaborator if you will.

1 Q So you say the treatment is the same as
2 the -- that you used for alcoholics?

3 A There are some similarities, yes.

4 Q Certainly you don't use rapid drinking
5 procedures for alcoholics, do you?

6 A Well, as a matter of fact, there are procedures
7 very similar to that that have been used with
8 alcoholics.

9 Q Really? What are they?

10 A People give alcoholics drugs which cause
11 either -- drugs which cause them to throw up when they
12 drink.

13 Electric shock had been used; that is,
14 there are treatments in which people may shock a
15 drinker as he or she is drinking, or they may be given
16 drugs which they take chronically and whose purpose it
17 is to make them sick if they should drink.

18 Q You've never used those treatments, or
19 have you --

20 A No, I haven't.

21 Q -- for a tobacco dependent person?

22 A Which treatment?

23 Q The ones you just mentioned.

24 A Those were treatments for alcoholism.

25 Q Right. And you say they were similar to

1 tobacco, so I'm asking you if you ever used them for
2 tobacco.

3 A The similarity is that the strategy is to make
4 the person sick while they're using the drug and,
5 therefore, to come to have negative, aversive
6 associations with the drug.

7 Q Right.

8 A So in some sense, yes, that is the same
9 treatment.

10 Q But in other senses it's not the same
11 treatment?

12 A That's right. It doesn't use the same drugs.

13 Q Right. And you don't use electric shock?

14 A I haven't, no. Others have.

15 Q Now, this counseling, telephone and
16 counseling service, could you describe -- and you say
17 you treated tobacco dependent people over the
18 telephone; is that right?

19 A I'm not sure I would -- well, the word treated
20 is ambiguous here.

21 Let me describe it to you rather than
22 characterize it.

23 Q Have you ever treated an alcoholic over
24 the telephone?

25 A No, but others have.

1 Q Solely over the telephone?

2 A I believe that's probably true.

3 Now, many of these people were also --
4 had other treatment elsewhere.

5 Again, if you will let me describe it
6 rather than characterize it I'd be glad to do that.

7 Q Go ahead. Why don't you do that.

8 A One of the problems in any treatment, whether
9 for alcoholism or for smoking, is that the treatment
10 stops but the patient's difficulty continues. And we
11 thought it would be a good strategy to make some kind
12 of counseling available by telephone. That way even
13 once the treatment -- the treatment stops in both --
14 in the sense that the difficulty people have both in
15 drinking and smoking persists for months, the
16 treatment does not; and also in the sense that crises
17 can occur for the person on a weekend and treatment
18 tends to be structured in such a way that it's not
19 available on the weekend.

20 So our approach was to provide basically
21 hot line crisis counseling to people who are having
22 difficulty in quitting smoking. So that was basically
23 a process.

24 Q Who is responsible -- who set up that
25 program?

1 A I did.

2 Q Did you -- who answered the phones?

3 A I did, and I also had staff who answered the
4 phones.

5 Q Where was it located?

6 A This was in L.A.

7 Q Who funded it?

8 A National Institute of Drug Abuse.

9 Q Who was the major grantee, if you will,
10 of that fund, of that grant application?

11 A The principal investigator?

12 Q The principal investigator.

13 A Was Murray Jarvik.

14 Q But he didn't supervise you in connection
15 with this counseling telephone service?

16 A Only very, very broadly pretty much.

17 Q He would agree with you that you set it
18 up and not he?

19 A He. I believe that's so.

20 Q Okay. He did not participate in the
21 telephone service?

22 A No.

23 Q All right. How many people did you have
24 working in the telephone service?

25 A Who were answering the phones directly; is that

1 what you're asking?

2 Q Yes.

3 A There were three other than me I believe.

4 Q How did you promote the telephone
5 service?

6 A We -- there were -- there were several methods.

7 We had notices on the radio. We made it
8 known to people, we had newspaper publicity. We had
9 made announcements in smoking clinics, both ones that
10 we conducted and ones that others conducted.

11 I think those were the major methods. We
12 were trying to promote it in as many ways as possible
13 really.

14 Q Wasn't that for people who had already
15 quit and had crises after they quit smoking?

16 A That's right.

17 Q It wasn't for smokers that were -- that
18 were continuing to smoke and that hadn't quit, right?

19 That's the way it was promoted?

20 A Can you say the question again?

21 Q It was promoted for people -- to help
22 people who had already quit to stay quit; isn't that
23 the way it was promoted?

24 A That's right. I don't believe that's how you
25 put it the first time, but that is correct.

1 Q Okay. Thank you.

2 And am I correct also that part of the
3 program was to elicit information from them by having
4 them -- in essence, having them call, having callers
5 fill out a questionnaire -- have the counselors rather
6 fill out a questionnaire when they were speaking to
7 these call-in people, right?

8 A That's correct.

9 Q So the purpose wasn't solely treatment?

10 A It was treatment, but not solely treatment.
11 That's correct.

12 Q Okay. The other three people that did
13 this with you, can you give me their names and their
14 then educational background?

15 A Certainly. Joan Rauschenberg. I couldn't
16 spell it for you, but I think it's about how it
17 sounds.

18 Q By their educational background I meant
19 their background at that point in time.

20 A I understand.

21 Q Thank you.

22 A She was a Ph.D. psychologist.

23 Another person was David Rapkin. He was
24 an advanced graduate student in clinical psychology
25 and he was in practice at that time.

1 And then Laura Read, who I believe at
2 that time she only had a bachelor's. She's gotten a
3 Ph.D. since, but had extensive training and experience
4 treating smoking and nicotine addiction.

5 Q How long did that program go on for by
6 the way?

7 A I'd have to give you a ballpark of about two
8 years, but I wouldn't stake my life on it.

9 Q Was there one office that that was
10 operated out of?

11 A Yes and no.

12 Q Where did you receive the phone calls?

13 A As I said, yes and no. We had a central
14 office.

15 In order to facilitate providing the
16 service efficiently we also had an answering service
17 which could route calls to -- to those people
18 providing treatment by beeping them on a beeper.

19 So there was both -- there was a central
20 office. Many calls were taken there. Evenings and
21 weekends calls might well be taken through an
22 answering service and paging an appropriate treatment
23 person.

24 Q Okay. What -- and you actually manned
25 the phones for a period of time?

1 A Correct.

2 Q How many people did you counsel in this
3 time?

4 A That is where my recall is going to be very
5 hazy, because there were so many and because initially
6 I was the only counselor. Over time I did less
7 counseling, but I continued to do some.

8 Q Initially you were the only person
9 answering the phones?

10 A Correct.

11 Q Okay. Did you make a record of the
12 people that called?

13 A Uh-huh.

14 Q Did you take their name and telephone
15 number?

16 A Not necessarily, because when people called a
17 hot line usually they expect anonymity, and we
18 provided them that and most of the time we didn't get
19 a name and a phone number.

20 Q So therefore, you treated these people
21 for tobacco dependence in one phone call; correct?

22 A We -- well, firstly there were quite a few
23 people with whom we had more than one contact, and I
24 wouldn't characterize it as our providing a complete
25 treatment for tobacco dependence.

1 As I said, we had a very specific
2 function of being able to counsel them at a moment of
3 crisis.

4 Q Okay. So you didn't provide a complete
5 treatment for tobacco dependence in this context --

6 A No. That's right.

7 Q -- of speaking to them on the telephone
8 once?

9 A Right.

10 Q And you didn't get their names?

11 A Not always.

12 Q And you don't know if they ever called
13 back again?

14 A In some cases, I mean we came to know people
15 even without knowing their names.

16 Q In any case, your treatment regimen did
17 not contemplate that you would have continuing
18 counseling sessions with them?

19 A That's correct, because it was designed to be a
20 crisis intervention service to be utilized at their
21 initiative.

22 So it was quite different than the
23 traditional treatment modality in which you would see
24 a person repeatedly, and was not meant to be a
25 complete substitute for it.

1 Q But it's still your opinion that in this
2 context you treated people for tobacco dependence?

3 I just want --

4 A I think I need a clarification of how you mean
5 treated for tobacco dependence. I think I've
6 characterized it in some detail.

7 Q Well, you understood that there's a
8 difference between what you did with these people and
9 what you did with the couple of people that you
10 treated for tobacco dependence when you were working
11 in --

12 A It was quite different.

13 Q Let me finish.

14 When you were working at Jeffrey Hutter's
15 office?

16 A Yes.

17 Q There's a difference, right?

18 A Uh-huh.

19 Q What you did in Jeffrey Hutter's office
20 would be what you would characterize as more
21 traditional complete treatment to tobacco dependence;
22 correct?

23 A It was more traditional and more intense.
24 That's accurate.

25 Q It was not more complete though?

1 A It was more complete. I'm not sure whether it
2 was complete since it wasn't always successful.

3 Q That's what I mean by tobacco --
4 treatment of tobacco dependence.

5 A Okay.

6 Q All right?

7 Prior to 1981 is there any other setting
8 in which you provided that kind of treatment?

9 A Other than the ones I've already listed for
10 you?

11 Q Other than Hutter's is the only one I've
12 done.

13 A I've listed running smoking cessation groups in
14 a couple of contexts, and that was meant to be
15 treatment for tobacco dependence.

16 Q Okay. We're going to get to them.

17 But in terms of actually treating an
18 individual person who gave you their name and who
19 expected from you what you characterized as complete
20 treatment for tobacco dependence --

21 A No. When I characterized --

22 Q -- you only did that in the context of
23 your work in Hutter's office?

24 A No. That's not accurate.

25 Q Okay. Where else did you do that?

1 A First I want to step back.

2 I didn't say that it was complete
3 treatment. I said it was more complete relative to a
4 phone counseling context.

5 Q Okay.

6 A The two contexts that I gave you are contexts
7 in which we ran group treatment programs for people
8 who were trying to quit smoking.

9 Q Okay. Have you ever given complete
10 treatment to anybody, or what you characterize in
11 Hutter's office as being more complete?

12 A The problem of treating nicotine dependence is
13 so difficult that I'm not sure what complete treatment
14 is.

15 Q You don't know what complete treatment
16 is?

17 A Let me finish, please.

18 MR. DARNELL: He was not finished with
19 his answer.

20 A That is, our treatments even to date are -- our
21 best efforts are not always successful, and in that
22 sense one could say that they're incomplete.

23 Q Okay. Let's go to the counseling to
24 community people which you mentioned before.

25 A Uh-huh.

1 Q Can you describe that for us?

2 A Yes. It would have been a group oriented
3 treatment; that is, people would enroll and come in as
4 a group and at that time would -- would return for a
5 number of sessions during which we would go through a
6 treatment program.

7 Q Okay. You did this under the auspices of
8 some entity; correct?

9 A Correct, yeah.

10 Q What entity?

11 A I think one of them would have been done under
12 the V.A. and one of them under UCLA.

13 Q Who was in charge of the one at the V.A.?

14 A I was.

15 Q Who was in charge of the one at UCLA?

16 A I was.

17 Q Was there anybody else that worked with
18 you in the V.A. one?

19 A What do you mean by worked with me?

20 Q Is there anyone who worked with you in
21 the UCLA one?

22 A What do you mean by work with me?

23 Q If you can't answer the question -- if
24 you're going to ask me questions I'm just going to
25 plow through here.

1 A Okay.

2 Q Tell me this: Who funded the one that
3 operated in the V.A.?

4 A The V.A. did, I believe.

5 Q Who funded the one operating in UCLA?

6 A I think that would have been funded under the
7 NIDA grant.

8 Q That's the NIDA grant that Murray Jarvik
9 was the --

10 A Principal investigator of.

11 Q -- principal investigator?

12 A Uh-huh.

13 Q I assume that your hot line project
14 resulted in published papers?

15 A It did.

16 Q Okay. Did this community counseling
17 program that was funded by the NIDA grant also result
18 in published papers?

19 A No, it didn't.

20 Q Was data collected for research purposes
21 in connection with that work?

22 A I'm trying to recall. I believe that it was.

23 Q What was the research purpose of that
24 program?

25 A We were interested in predictors of successful

17
1 outcomes. Since even with treatment many people would
2 be unable to quit smoking or would quit and then
3 relapse, we hoped we could understand better who would
4 succeed and who would not.

5 Q All right. Do you have any -- was there
6 a report done of that work, of the results of that
7 work?

8 A Do you mean by that a published report?

9 Q Yes.

10 A No, there was not.

11 Q Was there an unpublished report?

12 A I may have described for the funding agency an
13 internal report, but I can't recall.

14 Q Why was it not public?

15 A We never really completed it, and given the
16 funds we had, the work we did on the hot line seemed
17 more important at the time.

18 Q Why was it not completed?

19 A That's what I mean by not -- I just told you.

20 Q What was it in the research protocol that
21 was not completed?

22 A I believe that we did not complete the data
23 entry and data analysis. Again, for lack of
24 resources.

25 Q Were the people that came to this

1 community counseling program told that they were
2 participating in a research program?

3 A I believe they would have been, yes.

4 Q What were they told?

5 A I better not guess.

6 Q You don't know what they were told or
7 not, do you?

8 A I'm saying I don't recall. We're talking about
9 something that was about --

10 Q You don't recall?

11 A All right.

12 Q If you don't recall, you don't recall.

13 A They would have certainly -- they would have
14 been told they were participating in research along
15 with receiving treatment.

16 Q By the way, were the people that called
17 on a hot line, were they told that they were
18 participating in a research program?

19 A Yes, they were.

20 Q Okay.

21 MR. DARNELL: Excuse me. Off the record.

22 (Discussion off the record.)

23 BY MR. KEARNEY:

24 Q Now, when these people came in for the
25 community counseling program --

1 A You --

2 Q Withdrawn.

3 Could you describe what that program was?

4 I don't think we got to that yet.

5 A Okay. I can describe it broadly because I've
6 done a lot of this sort of treatment since then.

7 What we did -- their views -- what we did
8 with the next new and improved version may be a little
9 hazy, but I will try to characterize the broad
10 outlines.

11 Q Well, what I'd like you to do is try to
12 tell me what you remember about that one and then
13 we'll get to the new and improved version later.

14 A Well, we -- well, you know what, if you need
15 for me to distinguish those then I would refer -- need
16 to refer to documents, because frankly I've been doing
17 this for so long that they fade together.

18 Q So you don't remember what you did then?

19 A No. I'm saying that I'm -- I don't want to
20 mislead you and I don't want to remember as something
21 I did then something I, in fact, did later.

22 I really am trying to be responsive.

23 Q Did you -- do you remember anything --

24 A Sure.

25 Q -- that you did in this program,

1 counseling to community people --

2 A Sure.

3 Q -- which you've testified is a program in
4 which you treated tobacco --

5 A Sure.

6 Q -- dependence?

7 A Sure.

8 Q What did you do?

9 A We would have had a series of group meetings.
10 It's my -- my recollection would be that it would have
11 been about six to eight meetings of about an hour and
12 a half.

13 But, again, I must tell you that that
14 could be -- there's some guesstimating in there.

15 We would have analyzed -- each person
16 would have been helped to analyze his or her own
17 smoking patterns. We would have talked about the
18 tobacco withdrawal syndrome. We would have talked
19 about the possibility of relapse and the need to be
20 alert to that. And to -- to -- we would have problems
21 solved intensively with individuals in the group on
22 difficulties they had had either when they were trying
23 to quit or when they were quit and were vulnerabale to
24 relapse.

25 A lot of this treatment, even though it's

1 done in a group is done in an individualized
2 round-robin fashion. So a lot of it is clinically
3 oriented. It's not that structured. It's not just
4 follow an outline.

5 Q This is a discussion, free, rambling
6 discussion?

7 A No. I wouldn't say that. It's a very focused,
8 targeted discussion. Consultation.

9 Q How many people would be in the group?

10 A That would vary, but it might be ten. It would
11 not be unusual.

12 Q And what would be the variance?

13 A Probably four to twelve, four to fifteen.

14 Q And how many groups of four to fifteen or
15 four to twelve people did you have in this program at
16 the V.A. -- I mean at UCLA?

17 A I'm gonna say ten, but I have to warn you that
18 that's a ballpark figure. Again, this is --

19 Q Did they pay for this, the patients?

20 A No. I believe they did not.

21 Q Who was it that ran the groups?

22 A I ran some of them and then Laura Read, whom
23 I've already mentioned, ran others.

24 Q How many did you run of the ten groups?

25 A I probably ran three to four.

1 But, again, I'm -- that's a global
2 recollection.

3 Q So after these discussions what -- did
4 you in the course of these discussions ever tell
5 anybody to stop smoking?

6 A Of course we did. Not in quite that way.

7 Q Did any of them ever stop smoking?

8 A Yes.

9 Q What was your success rate?

10 A I don't know exactly.

11 Q How often -- let -- when were the
12 meetings run; was it once a week, once a month?

13 A As I recall and, again, I don't want to mislead
14 you, the meetings would have been on an irregular
15 schedule. Quite intensive at first and then a bit
16 more.

17 Q That they would have been planned, you
18 don't mean irregular as catch as catch can?

19 A No, no. They would be planned but they
20 wouldn't be like once a week, for example.

21 Q The interval would change?

22 A Exactly. Initially we might meet two or more.

23 Q What did you determine was the successful
24 quitting --

25 A As I indicated, we never completed that

1 research project for lack of resources.

2 Q You mentioned prior to '81 also treating
3 people for tobacco dependence in group treatment
4 sessions of patients and employees at the V.A.?

5 A Uh-huh.

6 Q Who ran them?

7 A Again, Laura Read and I. And Joan Rauschberger
8 may also have participated. I frankly can't recall.

9 Q Okay. What period of time was this?

10 A I'm gonna have to give you a broad ballpark.

11 Let's say '79 to '80. But again, I mean.
12 I'm inferring that rather than recalling it directly.

13 Q Could you explain this treatment?

14 A It's very similar to what I've just described
15 to you for the community people, with perhaps the
16 exception that because some of our patients were
17 psychiatric patients when we ran groups with
18 psychiatric patients we were more careful.

19 Q How did you promote these or get people
20 to come to them?

21 A As I recall, they were promoted within the
22 Veterans Administration campus.

23 Q That means putting up posters on a board?

24 A Putting up posters or circulars to -- to all
25 the offices at the V.A.

1 Letting psychologists and other treatment
2 professionals know that this was available to their
3 patients.

4 Q Did you keep records of the people that
5 attended and make records of their -- the course of
6 their progress?

7 A I believe in that instance we did not.

8 Q Did not?

9 A Did not. Because --

10 Q How many times did you do this from '79
11 to '80?

12 A Let me explain, that because we were treating
13 staff people there was concern about confidentiality
14 and embarrassment.

15 And, therefore, the -- what I recall is
16 the understanding was that we would not keep records
17 and would not create a medical record so as not to
18 scare off, if you will, staff people who might want to
19 seek treatment.

20 Q But you didn't keep records of any
21 patients who also chose to come to these sessions; is
22 that right?

23 A That's right. For the same reason.

24 Q Okay. What was your success rate there?

25 A I don't recall exactly. I do recall that it

1 was disappointing.

2 Q Do you recall anything else?

3 A I need more guidance than that.

4 Like what?

5 Q How do you know -- what do you recall now
6 that makes you believe that it was disappointing?

7 A Well, I remember discussions that the success
8 rate was less than in the community participants
9 groups, and that we thought that had to do with the
10 fact that these were psychiatric patients and the fact
11 that even some of the V.A. staff people were -- were
12 really very hard to quit -- very hard to treat and
13 very dependent.

14 Q Unfortunately we're only up to 1981.

15 Where else have you treated people for
16 tobacco dependence, in what other contexts?

17 A Okay.

18 Can I make a suggestion since we have
19 four minutes that we break here and pick up 1981?

20 Q I'd like to make a suggestion we go till
21 12:30 so we get this out of the way.

22 THE WITNESS: I'd like to be able to eat.

23 MR. DARNELL: I think the Doctor would
24 prefer to break now.

25 THE WITNESS: Or we can go to 12:15 as

1 agreed.

2 MR. KEARNEY: Let me think of a question
3 I can ask him and he can answer in four minutes.

4 I guess I can't, so we'll be back here by
5 one o'clock.

6 MR. DARNELL: 1:10.

7 MR. KEARNEY: 1:10.

8 (Lunch recess taken from 12:11 p.m. to
9 1:10 p.m.)

A F T E R N O O N S E S S I O N

CONTINUED DIRECT EXAMINATION BY MR. KEARNEY:

Q Dr. Shiffman, have you ever consulted in any other legal cases?

A Yes.

Q Can you tell me the names of those cases and the subject matter?

A One involving Mr. Darnell as -- I believe referred to as the Haines case.

The other, I don't know if one would characterize it as a legal case. It was a legal administrative proceeding. Had nothing to do with tobacco. My role in it was as a statistical aspect.

Q What was the nature of that case?

A Let me see if I can recall it for you.

The case was in San Diego, I believe. A physician had been -- I don't know what word to use -- dismissed from the medical staff of a hospital. He was appealing the decision arguing that there weren't good grounds.

And I was engaged by the attorneys for the hospital to address the issue of whether -- whether the medical records reflected an adequate grounds for taking action against this physician.

Q When did you have your first conversation

1 with any lawyer concerning the Haines case?

2 A Would have been roughly in the middle of '87.

3 Q And what, if anything, did you do in that
4 case?

5 A I'm not sure what you're asking.

6 What did I -- I met with Mr. Darnell and
7 Mr. Edell.

8 Q Did you do anything else?

9 A I've interviewed family members.

10 Q When did you interview family members?

11 A Let me think.

12 I'm not really sure. It could have been
13 late '87, early '88.

14 Q And who did you interview?

15 A The names escape me.

16 I think it was a Mrs. Rossi and a
17 Mrs. Haines. I can remember the faces better than the
18 names.

19 Q Pardon me?

20 A I can remember the faces, but I don't know the
21 names.

22 Q Okay. Anybody else?

23 A There may have been. I believe I interviewed
24 three people.

25 Q And you can't remember the third person?

1 A Pardon?

2 Q And you cannot remember the third person?

3 A Not right now. I've been focusing so much on
4 this case.

5 Q Okay. Fine.

6 Why did you interview those people?
7 What was your purpose?

8 A Because -- well, obviously one ground was that
9 I had been asked to, but my purpose was to elicit
10 information relevant to determining whether the man
11 who died had been dependent on nicotine.

12 Q Were those interviews important to your
13 development of an opinion with respect to whether or
14 not Peter Rossi was dependent?

15 A They were helpful.

16 Q Were they necessary?

17 A Some sort of information certainly was
18 necessary.

19 Whether it would have been necessary for
20 me to conduct interviews myself, I don't think so.

21 Q All right. Did you give -- have we
22 completed now all the cases that you have participated
23 in?

24 A Yes.

25 Q Have you ever given any testimony in

1 matters other than litigation matters; administrative
2 proceedings, legislation?

3 A No. Just what I told you about, that
4 administrative --

5 Q Have you ever smoked?

6 A Yes.

7 Q When did you begin?

8 A Let me think back.

9 Ballpark would be maybe 1968.

10 Q How old were you?

11 A I would have been about seventeen.

12 Q How long did you smoke for?

13 A Well, I've told you when I first started
14 smoking. I don't -- it was a period during which I
15 wasn't a regular smoker.

16 But I quit, I believe it would have been
17 1974.

18 Q When did you become a regular smoker?

19 A Probably not till about '72 perhaps.

20 Q Why did you quit?

21 A Two reasons: One is I came to realize how
22 unhealthy it was for me; and secondly, by that time I
23 was already involved in smoking research, and frankly
24 it was acutely embarrassing to be smoking.

25 Q In what respect was it acutely

1 embarrassing to be smoking?

2 A Well, people expected that someone studying
3 smoking should be cognizant of the health dangers and
4 cognizant enough of techniques for quitting to have
5 quit.

6 Q How did you quit?

7 A I'm not sure I understand the question.

8 Q How did you quit?

9 A As I recall, part of what happened was that I
10 was quite sick for awhile and unable to smoke without
11 gagging and throwing up. And so I was in a sense
12 forced to go through a difficult withdrawal.

13 At the end of that I decided that having
14 made that much progress I would maintain it.

15 I asked help from others in my
16 environment. I stopped cold turkey -- well, that's
17 implicit in what I've said. I was very vigilant.

18 I changed other aspects of my -- my life
19 so as to make smoking less likely, to make -- to
20 reduce cues that might cue me to smoke.

21 Q Did your parents smoke?

22 A No.

23 Q Any member -- any other members of your
24 family smoke?

25 A No.

1 Q Are you a member of any anti-smoking
2 group?

3 And if I have to define that I will.

4 A A definition would be helpful.

5 Q Are you a member of GASP?

6 A No.

7 Q ASH?

8 A No.

9 Q Any group like that that has as one of
10 its purposes to promote smoking cessation or people to
11 stop smoking and not start, or not start and stop?

12 A I have been involved with The American Cancer
13 Society, which I think has that as one of its stated
14 goals.

15 But that involvement has been -- member
16 wouldn't characterize it. I've advised them. It's
17 not a membership sort of organization.

18 Q Have you contributed money to them?

19 A To The American Cancer Society?

20 I probably have, yes.

21 Q Have you done that regularly over the
22 years?

23 A No.

24 Q Have you received money from them in any
25 way?

1 A Yes. In -- let me be sure I give you a
2 complete account of that.

3 In several ways. Again, all of them
4 not -- in a role as a consultant to them.

5 I served for a time as one of the members
6 of a committee at The American Cancer Society. This
7 is the national office whose job it was to review
8 research proposals and to make a scientific judgment
9 as to their merit.

10 Q When did you serve on that committee?

11 A I need to compute it.

12 (Pause.)

13 A Does anyone have a -- I think it was roughly
14 '83 to '86, but, again, I'm -- it's not information I
15 keep handy.

16 Q Okay.

17 A There were other -- oh, and your question was
18 did I receive any payment from them?

19 Q Right.

20 A And what they did was to pay us for our time
21 when we gathered in New York to meet and discuss these
22 proposals.

23 That's very standard that they would pay
24 their experts. It was rather modest as a matter of
25 fact.

1 Q What proposals did you review? Did they
2 fall in any particular area?

3 A Yes.

4 Q What area?

5 A Well, the name of the committee was called
6 Psychosocial and Behavioral Research, and it reviewed
7 research -- really the charge of the committee was
8 quite broad, so it reviewed any research which had to
9 do with psychosocial or behavioral factors related to
10 cancer.

11 I was essentially the expert on the
12 committee on smoking. So within that purview I would
13 have reviewed proposals to do with -- I'll try to
14 characterize the range because it was quite
15 variable -- the pharmacology of nicotine; techniques
16 for smoking cessation; prevention programs with school
17 children or other populations.

18 I've already said quitting techniques.
19 The situations that led to smoking; the dissemination
20 of smoking information, smoking and health
21 information.

22 Now, in the course of my work on that
23 committee I would have also reviewed proposals that
24 had little to do with smoking; that might have had to
25 do with, say, the reaction of children to distressing

1 or painful cancer treatment regimens; that would have
2 had to do with breast cancer screening programs.

3 Because as I say, the purview of the
4 committee was to review anything that had to do with
5 human behavior as it relates to cancer.

6 Q Doctor, have you ever written that you
7 are in favor of a ban on cigarette advertising?

8 A I don't believe I have.

9 Q Are you in favor of a ban on cigarette
10 advertising?

11 A To be honest --

12 MR. DARNELL: I'm going to object to
13 that. I don't think his personal beliefs on that, no
14 matter what they are, are relevant.

15 I'll permit him to answer.

16 A It's not a yes or no question for me. I'm
17 ambivalent about it.

18 On the one hand, knowing that smoking is
19 very dangerous and as a citizen concerned about that I
20 would like to see young people not take up smoking.
21 And since I think advertising contributes to that, I
22 see that as a social good.

23 On the other hand it -- I guess it's
24 First Amendment issues concern me and I -- I don't
25 like for us to be about the business of banning any

1 sort of public communication.

2 And so that's why I doubt that I have
3 spoken on that on either side. I think it's a very
4 very difficult matter and I -- I don't generally
5 support it.

6 Q Have you ever spoken on the matter of
7 forcing cigarette price increases by way of increased
8 taxation of cigarettes?

9 A Again, I don't recall that I ever have.

10 Q Do you have an opinion on whether or not
11 cigarette prices should be increased by way of
12 increased taxation?

13 MR. DARNELL: Same objection.

14 THE WITNESS: You want me to answer?

15 MR. DARNELL: Yes, you may.

16 A It's a similar sort of issue.

17 I suppose the reason the government
18 considers that is that A, it raises revenues, and B,
19 if -- if something is creating a lot of morbidity and
20 mortality and illness, then social policies that
21 reduce that seem to me to be a good thing.

22 Again, I have some ambivalence about it
23 because the -- I don't -- I don't see it and don't
24 want it to be a moralistic issue. And so to the
25 extent that I perceive that some people see it that

1 way, that makes me uncomfortable.

2 Q What do you mean by "a moralistic issue"?

3 A I mean that I sense in the statements of some
4 people who support those policies -- I don't know how
5 to characterize it -- a dislike or a looking down upon
6 people who smoke. And that -- that attitude makes me
7 uncomfortable.

8 Q Have you ever written about your opinion
9 on whether or not cigarette manufacturers should be
10 prohibited from manufacturing cigarettes?

11 A No, I have not.

12 Q Do you have an opinion on whether or not
13 cigarette manufacturers should be prohibited from
14 manufacturing cigarettes?

15 A Actually don't, because that's a huge social
16 policy quandry so I -- I really don't have a formed
17 opinion.

18 Q Have you discussed the social policy
19 issues on that question with anybody?

20 A Oh, I imagine I have. I mean, it's not a new
21 idea.

22 As I say, I haven't formed an opinion
23 because I feel uncomfortable with the idea of -- the
24 moralism that some people who hold that position seem
25 to express about it. That makes me uncomfortable.

1 Q Do you feel, sir, that you are qualified
2 to come to an opinion on whether or not cigarette
3 manufacturers should be prohibited from selling
4 cigarettes?

5 A As a matter of fact, I don't. I think that --
6 part of what I'm trying to say is that that is a huge,
7 complicated social policy question and one that has to
8 be -- is a matter of public debate and political
9 process.

10 Q Have you ever participated in any forums,
11 seminars, symposiums or meetings at which these
12 matters were -- this matter was discussed?

13 MR. DARNELL: Before you answer --

14 When you say "participated," you mean was
15 he physically present or did he actually speak on the
16 issue?

17 Q First we'll say physically present, then
18 we'll say participated in the sense that Mr. Darnell
19 just referred to.

20 A Okay. And the question regards whether the
21 manufacturer --

22 Q Whether or not you participated either by
23 being in attendance or actually participating verbally
24 in any meeting, seminar or forum at which the social
25 policy issues that you testified about --

1 A Which social policy issues?

2 Q Concerning whether or not a cigarette
3 manufacturer should be prohibited from manufacturing
4 cigarettes was discussed.

5 A It's possible. I don't recall it because it's
6 not --

7 Q Have you ever used any addictive drug?

8 A Well, I told you that I smoked, so in that
9 sense I did.

10 Q When were you -- have you done any work
11 in connection with the Haines case since your
12 interviews with the people you said you interviewed,
13 which was I believe Susan Haines and Martha Rossi?

14 MR. DARNELL: I'm not going to let you go
15 any further on that.

16 I'm not counsel for Haines as you know,
17 I've been disqualified. And I don't think it's fair
18 to the witness or fair to counsel in Haines that you
19 be going into that issue when they're not here.

20 So I'm going to direct him not to answer
21 that.

22 MR. KEARNEY: His -- let me say that it
23 is my position that his work conclusions and opinions
24 in any situation where he has formed an opinion and
25 made a diagnosis of tobacco dependence is fair game

1 for this deposition where we are taking discovery of
2 his qualifications, ability to render an opinion in
3 the Cipollone case, Mr. Darnell.

4 MR. DARNELL: You've stated your
5 position, I've stated mine. Let's continue.

6 MR. BLEAKLEY: It also goes to the issue
7 of Dr. Shiffman's bias, if any, for us to be able to
8 explore any kind of contacts he has had with any
9 plaintiff in any health smoking case.

10 BY MR. KEARNEY:

11 Q Did you form an opinion in your work in
12 the Haines case?

13 MR. DARNELL: I'll let him answer that.

14 A Yes, I did.

15 Q You did.

16 And what was that opinion?

17 MR. DARNELL: I don't think -- I don't
18 know that his opinion has been rendered into a form of
19 a report.

20 I assume you should ask that first. And
21 if he says it was you're certainly free to explore it.
22 If it hasn't been done -- I don't know what's
23 happening in Haines. I'm uncomfortable with the area
24 because I don't know what's happening.

25 Q When were you first contacted by anybody

2
1 concerning the Cipollone case?

2 A It would not have been long after that '87 time
3 that I at least saw materials from the Cipollone case.

4 Q So can you give us your best estimate as
5 to when that was?

6 A Early '88. Probably later.

7 Again, I'm sorry, but I'm just not
8 certain on the dates.

9 Q What was the first time you ever had any
10 discussion with anybody about the Cipollone case?

11 A I'm not sure I can remember the very first
12 time.

13 Q Can you recall who it was that you talked
14 about the case with the first time?

15 A I think it was with Mr. Darnell.

16 Q Pardon me?

17 A I think it would have been Mr. Darnell.

18 Q Prior to that time you had no discussions
19 about the Cipollone case with Dr. Jaffe?

20 A No. Dr. Jaffe and I have never had any
21 discussions about Cipollone.

22 Q Have Dr. Jaffe and you had any
23 discussions at all about the tobacco products
24 liability cases?

25 A No.

1 Q You've never had a discussion with him
2 about his involvement in the Cipollone case?

3 A I don't believe so.

4 Q Tell me what -- other than Mr. Darnell,
5 whom else have you spoken to about the Cipollone case?

6 A Ms. Henneberry, Marc Edell, Cynthia Walters,
7 Mr. Darnell's secretary I suppose.

8 And I have talked to -- I have mentioned
9 it to people at the University of Pittsburgh just to
10 the extent of explaining to them that I would be gone,
11 I would be occupied with this deposition and work.

12 So I've not discussed the substance, but
13 just said understand why I'm not in town.

14 Q And did you make any notes of your
15 discussions with Mr. Darnell and Ms. Henneberry?

16 A No.

17 Q Mr. Edell and Ms. Walters?

18 A No.

19 Q Did they tell you not to make notes?

20 A No.

21 Q Have you come to an opinion with respect
22 to the Cipollone matter?

23 A Yes.

24 Q When did you come to that opinion?

25 A The opinion would have been, you know, formed

1 around the time that my report was filed.

2 It would have been finalized, again, the
3 date escapes me, but that was relatively recent. I
4 think that was November.

5 I don't want to guess and, again, there's
6 obviously a record on it.

7 Q Can you tell us what you recall of your
8 discussions with Mr. Darnell?

9 MR. DARNELL: At what point in time?

10 Q When you recall that you had a first
11 contact with him about the Cipollone case.

12 A First contact. Yes. Mr. Darnell sent me the
13 deposition transcript of Dr. Jaffe, asked me to read
14 it, and in part he said he wanted me to be sure I knew
15 what I was getting into.

16 Q All right. Now, were you sent that
17 before the first trial of Cipollone?

18 A I'm not sure what the dates of the trial were.

19 Q You were aware that there was a first
20 trial in Cipollone?

21 A Yes.

22 Q And the dates were approximately the end
23 of January till the middle of June of 1988?

24 A Then I'm not certain, because that falls within
25 the time frame that I recall getting those materials

1 but I don't -- you know, I didn't make a record of the
2 actual date. It would have been around that time.

3 Q What else was said in that conversation
4 with Mr. Darnell when he --

5 A I think that was most of it. At that time I
6 don't think he saw me nor I saw myself as being asked
7 to provide an opinion in Cipollone.

8 Q Okay. Did you -- for what purpose then
9 were you reviewing the Jaffe deposition?

10 A As I indicated, Mr. Darnell wanted me to be
11 sure I understood what the deposition process was like
12 and that -- that I knew what I was getting into.

13 I think he wanted me to have a sense of
14 how good you people were.

15 Q What did you do after you reviewed, if
16 anything, you reviewed the Jaffe deposition testimony?

17 A What do you mean by "after"? When?

18 Q What, if anything, did you do in
19 connection with the Cipollone case?

20 A Ever since then?

21 Q Right. After you read the transcript of
22 the Jaffe deposition.

23 MR. DARNELL: Just so we're clear, when
24 you say in connection with the Cipollone case, for the
25 purpose of establishing an opinion or getting ready to

1 give an opinion in Cipollone or because it was part of
2 what he needed to do to get ready in Haines?

3 Because he may have had read something in
4 Cipollone that had to do with Haines, but wasn't for
5 the purpose of Cipollone, it was for the purpose of
6 another case. So I'm not sure where you're going.

7 A And, indeed, that's why I'm stumbling around.

8 Q I get the sense then, I understand that
9 you're reading the Jaffe deposition, in your view, in
10 connection with your work on the Haines case?

11 A Initially.

12 Q What, if anything, did you do after you
13 read the Jaffe deposition in connection with Cipollone
14 or Haines?

15 A I have since then reviewed not only Jaffe's
16 deposition, but also, again, I want to be sure I'm
17 accurate and complete as far as I can be, the
18 transcript of his testimony at trial.

19 Q When did you review that?

20 A I think that would have been after the trial
21 was over.

22 Q Over?

23 A Yeah.

24 Q So sometime after June of 1988?

25 A Yes.

1 Q All right. What else did you do?

2 A I reviewed the depositions of family members,
3 both -- well, actually firstly Mrs. Cipollone's
4 deposition.

5 Q When did you do that, Doctor?

6 A That would have been later. In 1990. I'd say
7 the second half of '90, in the fall.

8 Q Did somebody ask you to do that?

9 A Yes.

10 Q Who did?

11 A I believe that would have been Mr. Edell or
12 Ms. Walters.

13 Q All right. And you understood that was
14 in connection with the Cipollone case?

15 A Yes, I believe that by that time they had asked
16 me whether I would be prepared to render an opinion on
17 Mrs. Cipollone, and I said that I would.

18 Q Can you tell us when you had -- when was
19 your first conversation with Mr. Edell or Ms. Walters
20 respecting Cipollone?

21 A You know, I'm not really sure.

22 Q All right. Can you give me the substance
23 of the conversation?

24 A The substance would have been that the matter
25 had been returned on appeal for retrial and that they

1 asked me, you know, whether I would be willing and
2 available to review materials and render an opinion.

3 Q Is that over the telephone or was it in
4 person?

5 A Over the telephone.

6 Q Did you ever meet with them after that?

7 A I've never met Ms. Walters. I've met -- I met
8 Marc Edell.

9 Q When did you meet Marc Edell?

10 A Now that hadn't to do entirely to do with
11 Haines, so I don't know.

12 Q All right. When was that?

13 MR. DARNELL: You can answer it.

14 THE WITNESS: Okay.

15 A Oh, no, no. I can be more exact. August 1990.

16 Q And where was that meeting?

17 A Seattle, Washington.

18 Q Did you make any notes of that meeting?

19 A No, sir.

20 Q Have you ever had any correspondence with
21 Ms. Walters or Mr. Edell?

22 A Written correspondence?

23 Q Yes.

24 A Our correspondence has consisted pretty much of
25 cover letters, letters of transmittal.

1 I've not -- I have not sent -- they've
2 sent me a lot of documents, but not correspondence.

3 Q Was there any discussion in this August
4 1990 meeting in Seattle with Mr. Edell about the
5 Cipollone case?

6 A No.

7 Q What was discussed about the Haines case?

8 MR. DARNELL: I'm going to object to
9 that. He can answer it.

10 A In fact, it was less about the details of the
11 Haines case than Mr. Edell had read some of my
12 published writings and wanted to ask -- was kind of
13 checking out his understanding of what I meant in
14 various writings.

15 Q Okay.

16 A So we didn't -- we didn't much talk about
17 Haines per se, although it was very clear in the
18 context that -- in fact, at that time I had no idea
19 that -- I don't even even think I knew Cipollone had
20 been returned for trial.

21 Q What did -- what have Mr. Edell or
22 Ms. Walters, or Mr. Darnell for that matter, told you
23 about the outcome of the addiction issue in the first
24 trial of Cipollone?

25 A What they said was that the jury had -- I'm

1 trying to remember. That the jury had assigned a
2 substantial amount of -- there's a legal term here.

3 Q Responsibility?

4 A I can't remember. Yeah, responsibility to
5 Mrs. Cipollone.

6 And I saw that as -- and I think they saw
7 that as reflecting some, I don't know, reflecting
8 their response to the addiction issue I guess.

9 Q So that what you're saying is that you
10 discussed the fact that the jury found that
11 Mrs. Cipollone's smoking was knowing and voluntary?

12 A I don't think that's how they characterized it
13 and it's not how I would characterize it.

14 I don't know that the jury -- I honestly
15 just don't know legally whether that's what the jury
16 said.

17 Q And I'm not -- I'm just asking you if
18 there was a discussion about that.

19 A No.

20 Q But you understood that when the jury
21 found that Mrs. Cipollone was 80 percent responsible,
22 that that had something to do with the addiction
23 issue?

24 A Yeah.

25 Q And you understood that that meant that

1 the jury did not buy the addiction business. Is that
2 basically it?

3 A No. That's not how I would characterize it.

4 Q Tell me what it is. Tell me what you
5 understood the connection was between the 80
6 percent -- finding of 80 percent responsibility and
7 this -- the addiction issue in the Cipollone case.

8 A That they felt she was partly at fault.

9 Q Have you had any discussion with any of
10 those lawyers concerning the testimony or opinions
11 offered in the first case by Dr. Jaffe?

12 A Uh-huh.

13 Q Tell me about those discussions.

14 A Let me try to recall them.

15 (Pause.)

16 A What's the question again?

17 I'm sorry. I'm just fading out.

18 Q I asked you to tell me the substance of
19 the discussions that you had with any of those lawyers
20 that we've mentioned concerning the testimony and
21 opinions offered by Dr. Jaffe at the first trial or at
22 his deposition.

23 A Right. I think we -- we talked about how
24 difficult a deposition was.

25 We talked about Jerry's background and

1 expertise. We talked about his style of presenting
2 evidence. We talked about his -- his conduct of the
3 interview of Mrs. Cipollone.

4 Q Anything else?

5 A Not that I can recall right now.

6 Q Did you discuss the nature of his
7 opinions in the case?

8 A Uh-huh.

9 Q What discussions did you have with the
10 lawyers about the conduct by Dr. Jaffe of his
11 interview with Mrs. Cipollone?

12 A We talked about basically that he had -- there
13 were some things that he later was embarrassed by and
14 wished he had asked, I wish he had asked, that it was
15 in retrospect imperfect. That was most of it.

16 Q And in what respect imperfect?

17 A Well, he was, as you know, at the time unaware
18 that she had consulted a psychiatrist and so hadn't
19 apparently asked about that. Didn't have an
20 opportunity to pursue that with her.

21 He -- you know, there were times when the
22 time frame of his questions were not clear.

23 Q Meaning what?

24 A Well, there were times when he asked her about
25 some response to something and it wasn't clear when he

1 was asking about.

2 Q Whether he was asking about 1983 when the
3 interview was conducted or whether he was asking about
4 1981 when she stopped smoking?

5 A No. That was usually clear.

6 Q Tell me then what you mean.

7 A When he -- when she described routing in the
8 garbage can for cigarettes he didn't ask when that
9 was. That was an example. So --

10 Q What was discussed about the content and
11 nature of his -- of his opinion?

12 A I'm not sure what you're asking different from
13 what I've just answered.

14 Q All right. In your discussions with the
15 lawyers -- and you understand by that I mean to
16 include Ms. Walters, Mr. Edell and Mr. Darnell.

17 A All right.

18 Q What was discussed about the nature and
19 content of Dr. Jaffe's opinion in this case?

20 A They asked me whether I agreed with the basic
21 substance of it, and I said that I did.

22 Q And what was the basic substance of it
23 that you understood you agreed with at the time?

24 A That nicotine -- well, let me -- let me be sure
25 to answer this accurately.

1 That nicotine is a -- an active,
2 psychoactive drug. That Mrs. Cipollone was dependent
3 on nicotine and smoking. That was the basic
4 substance.

5 Q Now, you've -- have you read the Jaffe
6 trial testimony or deposition since you read them back
7 in 1988 and '87?

8 A Yes, I have.

9 Q And you read them in preparation for this
10 deposition?

11 A Yes, I did.

12 Q Is there -- and you made notes about
13 them?

14 A Correct.

15 Q And you studied those notes in
16 preparation for the deposition?

17 A Correct.

18 Q Is there anything that you disagree with
19 that Dr. Jaffe said in his opinions in this case, in
20 giving his opinions in this case?

21 MR. DARNELL: Don't answer that question.
22 That's entirely too broad.

23 If you want to confront him with a
24 statement that Dr. Jaffe made or confront him with a
25 part of his notes and ask whether this indicates some

1 disapproval or disagreement, we provided them to you.
2 Go ahead.

3 But I think it's unfair to ask a witness
4 to characterize several, almost a thousand pages of
5 testimony between the deposition and the trial
6 testimony, and ask him whether he agrees with it.
7 So I'm going to have to direct him not to answer.

8 Q Is there anything that you can think of
9 right now in those -- in that testimony that you've
10 read and reviewed that you disagree with?

11 A I really would prefer to have the notes in
12 front of me if you'd like to --

13 Q Is it a fact that you can't answer that
14 question?

15 A Well, I want to be as factual and accurate as
16 possible.

17 Q I'm just going to continue. I'll get
18 back to that later.

19 What else did you do in connection with
20 developing your opinions -- your opinion in this case
21 which you said was formed in and about the time of
22 your report, which I represent to you is dated
23 November 30, 1990?

24 A That sounds right. I read it.

25 Q Excuse me just a minute, Doctor. You're

1 going to have to I think speak up --

2 A Sorry.

3 Q -- so that she can pick up everything.

4 A Okay. I read the deposition testimony of other
5 family members. That included Anthony Cipollone. It
6 included Rosalie Langshultz.

7 I have to remember all the names here.
8 Thomas Cipollone. Maria Jordan. There was someone
9 named Deglio, I believe. I don't remember the first
10 name.

11 Q Tomasina?

12 A That sounds right.

13 There was -- there were others. Let me
14 just think.

15 (Pause.)

16 A I'm blocking on the names, but there were
17 others. I guess you know I made notes on most of
18 them.

19 Q Rosalie Langshultz?

20 A Rosalie Langshultz. I thought I had mentioned
21 her.

22 Q You may have.

23 And the son-in-law, Rosalie Lanshultz's
24 husband's deposition, did you read that one?

25 A What was the name?

1 Q Ken I think. Ken Langshultz.

2 A I don't believe I did that.

3 Q William Jordan?

4 A Oh, I think I did read that one. Yes.

5 Q Thomas DeFrancesco you read?

6 A I did read that.

7 Q Did you have occasion to meet with
8 Mr. Antonio Cipollone before he passed away --

9 A No.

10 Q -- in the winter of '90?

11 A No.

12 Q Would that have been useful to your
13 ability to get all the facts in order to give an
14 opinion here?

15 MR. DARNELL: I think he passed away in
16 the winter of early 1990.

17 Q I'm sorry. If I didn't say that I
18 misspoke.

19 MR. DARNELL: Winter could be December of
20 1989 or it could be January 1990.

21 I think he passed away in the beginning,
22 right after, within days of the third circuit's
23 opinion. A day or two before, a day or two after.

24 Q Can you answer my question?

25 A Did I have an occasion to meet with him, no.

1 Q Would that have been useful for your
2 opinions?

3 A I don't think it would have been very useful
4 because as you know, he was very thoroughly deposed.
5 So I felt I had most of his information available to
6 me.

7 Q You would prefer to read a deposition
8 than to interview --

9 A No.

10 Q -- a family member?

11 A No.

12 Q It would be more useful to read a
13 deposition than to interview a family member?

14 A No. It would be slightly more useful to
15 interview a family member.

16 But most of the information that was
17 relevant was asked repeatedly, so I felt I had
18 adequate -- an adequate sense of his reports.

19 Q Did you interview Thomas Cipollone before
20 you formulated your opinions in this case?

21 A No.

22 Q Did you ask to?

23 A No.

24 Q Did you interview Rosalie Langshultz
25 before you formulated your opinions in this case?

1 A No.

2 Q Did you ask to?

3 A No.

4 Q Did you interview Maria Jordan?

5 A No, I did not.

6 Q Did you interview Mrs. Cipollone's
7 brother and sister?

8 A No.

9 Q Did you ask to conduct any of those
10 interviews?

11 A No.

12 Q Why not, if the interviews would be more
13 useful than reading their deposition?

14 A There -- that's -- you asked me two different
15 questions. One is was it more useful and one was what
16 I prefer to do.

17 Being a clinical psychologist I'm more
18 accustomed to interviewing people than to reading
19 depositions.

20 However, I didn't ask to because it
21 seemed to me that they had been asked, exhausted ad
22 infinitum and, if anything, some of the people who
23 were interviewed essentially made it clear that they
24 had little relevant information. So it didn't seem to
25 me to add much to what I already --

1 Q They had little relevant information
2 given in the course of their deposition?

3 A Relevant to assessment of dependence in that
4 some of them had little recall of details of her
5 smoking behavior.

6 Obviously they have given information
7 relevant to other matters, but it didn't seem --
8 didn't seem to add much; that is, that the depositions
9 were rather thorough.

10 Q Well, that's two different things;
11 deposition is thorough and not adding much to your
12 opinion. Which was it?

13 MR. DARNELL: Or both.

14 A Both.

15 Q Pardon me?

16 A Both. It wouldn't have added much because the
17 depositions were rather thorough.

18 Q In your work in the Haines case you opted
19 to interview Susan Haines and Mrs. Rossi instead of
20 reading their depositions; correct?

21 A Right.

22 Q Why did you do that if the depositions
23 are generally better than the personal interviews?

24 A Actually, I don't even know that they have been
25 deposed. At this -- to this point I've not seen

1 depositions.

2 Q But did you ask the lawyers to interview
3 those people, for permission to interview them?

4 A Yes. And the context was different. We were
5 just starting.

6 Here I had before me the depositions and
7 they seemed to me to be adequate to form an opinion.
8 In that case I had no depositions and I opted to
9 interview them as a way to gather information.

10 Q The lawyers didn't tell you that at that
11 time, that these people had already been deposed?

12 A I don't recall that they have. As I say, to
13 this point I couldn't tell you whether they have or
14 not.

15 Q Has anybody told you that you can't
16 interview Thomas Cipollone --

17 A No.

18 Q -- for the purposes of your opinion in
19 this case?

20 A No, they have not.

21 Q What else have you done in connection
22 with -- let me -- did you read all these depositions
23 before November 30, 1990?

24 A I at least browsed through them looking for
25 relevant information.

1 I have since read them more thoroughly
2 and made more thorough notes. Looked to see if there
3 were relevant elements in the depositions at that
4 time.

5 Q What else have you done in connection
6 with formulating your opinion?

7 A Well, I have read Dr. Jaffe's report in
8 Cipollone.

9 I've examined his -- or copies, I should
10 say, of his notes and materials related to that
11 interview.

12 I have looked at the Surgeon General's
13 report, but that's something I do anyway.

14 Q Did you do that prior to formulating your
15 opinion in November of 1990?

16 A Did I read the Surgeon General's report?

17 Q Right.

18 A Yes.

19 MR. DARNELL: Just for clarity, are we
20 talking about the nicotine addiction report?

21 THE WITNESS: Oh, sorry.

22 A Yes.

23 Q Okay. What else did you do?

24 A I sat and thought a lot.

25 I made notes that I believe you have

1 seen. I made outlines, tried to cross-reference
2 different sources of information.

3 I think that adequately describes it. I
4 can't -- it's been a substantial period of time and a
5 rather busy one, so I think -- I think that captures
6 it all.

7 Q Why did you read Jaffe's report and the
8 notes that he took at his interview with Rose
9 Cipollone and the other materials that he said he used
10 at his interview with Rose Cipollone?

11 A They seem to me to be relevant to making an
12 assessment of Mrs. Cipollone's dependence on nicotine.

13 Q Okay. You mentioned in one of your prior
14 answers that you had --

15 MR. KEARNEY: Well, let me have this
16 document marked as the next document. Let's start
17 with that.

18 (Letter dated 11/30/90, Walters to
19 counsel for defendants with attachments, received and
20 marked as Defendant's Exhibit Shiffman-10 for
21 Identification.)

22 Q Doctor, I'm going to show you a letter
23 from Cynthia Walters to counsel for defendants marked
24 as Shiffman-10, dated November 30, 1990.

25 Other than my marks on the top, "File

1 Shiffman" and some underlining I've got on the second
2 page, I'm going to ask you if you have seen this
3 document prior to November 30, 1990.

4 (Witness reviews.)

5 A Yes, I believe I did see this document.

6 Q Tell us how it was prepared.

7 A There were discussions I think initially with
8 Mr. Darnell. That was at about the time that he
9 got -- he had to excuse himself for another case. I
10 forget the exact time line.

11 So we discussed -- we -- most of the
12 discussion took place with Marc Edell and Cynthia
13 Walters.

14 They asked me about my opinions. They
15 drafted the letter and asked me to review it to make
16 sure that it was an adequate -- you know, that it was
17 a reasonable representation of my views.

18 And I -- I believe that this is the --
19 the version that I approved.

20 Q All right. Can I have it?

21 A Sure. Let me just --

22 Q Take your time with it.

23 (Witness reviews.)

24 Q Okay. Can you tell me what your opinions
25 are in this case?

1 A As stated in the document, I believe that
2 Mrs. Cipollone was dependent on smoking and nicotine.

3 Q Do you have any other opinions?

4 A Yes. It goes with the concept of dependence as
5 I mean it. That that made it very difficult for her
6 to quit smoking and impaired her ability to -- to act
7 flexibly with regard to smoking and to, you might say,
8 dispassionately evaluate or process information about
9 the hazards of smoking.

10 Q Anything else? Do you have any other
11 opinions?

12 A Well, maybe if you could give me some more
13 guidance I'd have an answer.

14 Q I'm not your lawyer.

15 A Right.

16 Q Have you come to any other --

17 MR. DARNELL: I should say, Doctor, if
18 you have to review any notes or look at any documents
19 in order to help you with that, go ahead and do so if
20 you think it's necessary.

21 This is not a closed book test.

22 A Okay. Well, I can look at the report again
23 perhaps.

24 Q Fine.

25 (Witness reviews.)

1 A Well, maybe I can expand on that.

2 I have said specifically that Rose
3 Cipollone was dependent on smoking and nicotine.
4 I would further state that nicotine is a dependence
5 producing drug, and so that she was typical in that
6 respect.

7 As I've said, I think that made it --
8 made her smoking behavior very compulsive and
9 difficult to change, and she was aware of that
10 difficulty.

11 (Alan Naar, Esq. arrives.)

12 THE WITNESS: May I be introduced?

13 MR. DARNELL: Alan Naar from Greenbaum's
14 office.

15 THE WITNESS: All right.

16 MR. DARNELL: New Jersey counsel for
17 Liggett.

18 BY MR. KEARNEY:

19 Q Have you completed your answer?

20 A That -- that gives the broad outlines of my
21 opinions.

22 Q All right. Tell me, when did
23 Mrs. Cipollone become aware of her difficulty in
24 changing her smoking behavior?

25 A I would say that at the very latest it would

1 have been in 1947 when she was pregnant and trying to
2 quit smoking during that time.

3 Q So it could be that before that she was
4 aware that she had difficulty or would have difficulty
5 in changing her smoking behavior?

6 A It's possible, although it seems as though from
7 the way she talked about it that it was in '47 that
8 that was brought --

9 Q So she understood that then?

10 A I believe so. I'm not -- to be clear, I'm not
11 saying she would have been able to verbalize it. But
12 see, her experience would have been compelling.

13 Q When was she first able to verbalize it?

14 A May I look at my notes? Because I believe she
15 made statements to that effect because I don't know
16 what the time frame is.

17 Q When did she make statements to that
18 effect?

19 MR. DARNELL: He just said he didn't
20 know.

21 A At her deposition.

22 Q At her deposition?

23 A She spoke about things she had said in the
24 past.

25 Q So was there any time before her

1 deposition that she was able to verbalize the fact
2 that she was aware of difficulty in changing her
3 smoking behavior?

4 A Let me try to be clear.

5 What she reported at her deposition was
6 partly statements she said earlier. So what I'm
7 not -- I'm saying that her deposition contained
8 reports of earlier statements.

9 Q What would you need to look at, sir, to
10 answer my question?

11 A It would be helpful if I could look at her
12 deposition and my notes of her deposition if you want
13 an exact time frame. She may well have verbalized it
14 with regard to '47.

15 Q Okay. You said that Rose Cipollone was
16 dependent.

17 Could you define for us your definition
18 of dependent?

19 A Dependence is a condition growing out of
20 chronic use of a psychoactive drug. I should say that
21 the condition has the characteristics of a syndrome;
22 that is, it has many facets, not all of which need to
23 be present in the same degree.

24 And among them are the development of
25 tolerance to the drug; the emergence of a withdrawal

1 syndrome on cessation of the drug. Compulse -- the
2 person's use of the drug becomes compulsive. It
3 becomes less flexible than other behaviors. It's
4 characterized by being less responsive to situational
5 conditions, by being less responsive to other -- being
6 weighed with other values or organic needs.

7 It becomes, therefore, less completely
8 voluntary. It's marked by difficulty changing and
9 especially stopping the drug use, and by a tendency to
10 resume drug use if the person is able to stop it.

11 And it often produces strong urges or
12 cravings for drug use.

13 Q Anything else?

14 A That's all for now.

15 Q Now, I'd like you to tell me whatever
16 else there is that you can recall right now.

17 You're not holding back anything that you
18 can recall --

19 A No.

20 Q -- are you?

21 A No.

22 Q When did Rose Cipollone become dependent
23 on smoking nicotine?

24 A I believe that at least by 1947 she was
25 dependent.

1 Q She was dependent in 1947?

2 A Correct.

3 Q Pardon me?

4 A Correct.

5 Q And that was during the time period when
6 she was not -- when she quit or cut down during her
7 pregnancy, during that time period she was dependent?

8 A She did not quit, in my opinion, from the way I
9 read the facts. During that time I believe she was
10 dependent.

11 Q And you're an expert reader of
12 depositions?

13 MR. DARNELL: That was a snippy question.
14 You need not answer it.

15 Q What do you base your conclusion on that
16 she -- did you read the deposition of Tony Cipollone?

17 A Yes, I did.

18 Q What did Tony Cipollone say about her
19 smoking in 1947?

20 A May I look at my notes to refresh my memory?

21 Q Sure.

22 MR. DARNELL: Just so we're clear, have
23 you marked all the notes that we've produced as
24 exhibits?

25 MR. KEARNEY: Well, in the course, Alan,

1 we will put them on the record.

2 MR. DARNELL: It seems easy for him to
3 look at what's on the table instead of -- and start
4 digging.

5 MR. KEARNEY: Absolutely.

6 MR. DARNELL: May I have a representation
7 from you that each of the various sets that I
8 delineated in my cover letter of -- was marked?

9 THE WITNESS: I can go get the --

10 MR. DARNELL: Look here. Let's take a
11 five-minute break so we can all stretch.

12 THE WITNESS: In fact, I don't see here
13 the deposition, my notes on the deposition of Tony
14 Cipollone.

15 Sorry. Sorry. It's just stapled.

16 (Recess.)

17 BY MR. KEARNEY:

18 Q Dr. Shiffman, did Mrs. Cipollone exhibit
19 a tolerance to cigarette smoking?

20 A Are we switching from the question I was
21 addressing in -- I thought I went out to look at this
22 to address a question?

23 Q I did not put this question to you
24 before. It's a different question.

25 MR. DARNELL: If he doesn't want his

1 question answered, that's fine.

2 A That's okay. I'm just not used to it.

3 Yes, she did.

4 Q Can you describe how she exhibited
5 tolerance to smoking?

6 A I can give you a couple of examples.

7 She started out, she stated, by smoking
8 two to three cigarettes a day. Within a period of a
9 year she was smoking 20. As she described it, that
10 would indicate tolerance.

11 The other example is appropos of what we
12 were just discussing. During her pregnancy she
13 described smoking a few a day, but when she described
14 the -- the experience of her smoking at the time of
15 delivery, I guess this would have been Maria Jordan's
16 delivery, she said she then had a pack within 24
17 hours.

18 That would indicate tolerance in that if
19 you took a naive person, by which I mean not a room
20 but someone who hasn't smoked, and they smoke a pack,
21 they basically physically couldn't. They would
22 experience toxicity.

23 So that goes to show that her body had
24 learned to tolerate nicotine, and indeed it goes to
25 show that that tolerance persisted over the course of

1 her pregnancy.

2 Q Any other examples of tolerance?

3 A I think she also -- there was some escalation
4 in her smoking over the course of time to something
5 over a pack a day, but I think those are the main
6 indicators of tolerance here.

7 Q None others?

8 A Pardon?

9 Q I want you to tell me not the main ones,
10 I want you to tell me all the instances where you
11 believe her behavior exhibited tolerance to cigarette
12 smoking.

13 A Okay. I will try to enumerate all of them.

14 Again --

15 Q Not the ones you just gave us, if there
16 are any others.

17 MR. DARNELL: Additional ones, if you
18 have any.

19 A Right. I just -- without going through every
20 line of the deposition I will try my best from the
21 notes that I have.

22 Q Let me -- did she smoke more when she
23 switched to lower yielding filter cigarettes in the
24 late '60s and early '70s?

25 A That is unclear. So I'm not basing my opinion

1 of tolerance on that.

2 Q So you don't know whether or not she
3 compensated?

4 A No, I didn't say that. I say it's not clear
5 that she smoked -- there are other ways to compensate.

6 With regard to indicators of tolerance,
7 she reported that sometimes she smoked up to 40 a day
8 and she -- and others reported that she sometimes lit
9 one from another.

10 Again, such behavior in an intolerant
11 person would produce severe toxicity. So her ability
12 not only to tolerate it but to not show adverse,
13 immediate toxic effects goes to speak to her tolerance
14 to nicotine.

15 Q Okay. Did she exhibit withdrawal?

16 A She did exhibit withdrawal to some extent in
17 1947 and again --

18 Q Could you explain what withdrawal she
19 exhibited in '47?

20 A First let me say again, that as I understand
21 her testimony at deposition she reported not quitting,
22 but cutting down.

23 Q To what?

24 A Pardon?

25 Q To what?

1 A Let me look that up so I can answer that
2 correctly.

3 (Witness reviews.)

4 A She implies that to just a few a day.

5 And she states the relevance of that is
6 that she gives some evidence of having essentially
7 tried to minimize withdrawal with that smoking.

8 So I don't think her withdrawal was
9 severe because she didn't let it get to that point,
10 but she exhibited withdrawal and she exhibited --

11 Q She exhibited withdrawal but not severe
12 withdrawal in 1947 when she cut down; correct? Is
13 that what you're saying?

14 A I'm saying because she essentially didn't act
15 to keep it from getting more severe.

16 Q Well, didn't -- haven't you done studies,
17 Doctor, that say that people who cut down actually --
18 rather than quitting cold turkey, actually show higher
19 and more severe withdrawal symptoms than the people
20 who just stop completely?

21 A What that research actually shows is that
22 cutting down prolongs withdrawal. It doesn't make it
23 more severe, it prolongs it, and indeed I think that
24 she did that.

25 Q I agree. I agree with what your

1 statement is about that, what your results were in the
2 study.

3 MR. DARNELL: And you further agree that
4 you mischaracterized those results in your previous
5 question?

6 MR. KEARNEY: I absolutely do, and I
7 stand corrected. But my point is still made.

8 BY MR. KEARNEY:

9 Q Does that demonstrate to you that her
10 smoking during that period of time was compulsive?

11 MR. DARNELL: Excuse me. During that
12 period of time is this?

13 Q During 1947 when she was pregnant and she
14 was smoking a few a day, does that demonstrate to you
15 that during that period of time her smoking was
16 compulsive?

17 A The fact that she continued to smoke when she
18 stated she wanted to quit, had been urged to quit and
19 that she was unable to stop smoking, does -- is one of
20 the pieces of evidence supporting a compulsiveness of
21 her smoking.

22 Q It's your conclusion that at that period
23 of time she wanted to quit entirely, and that's your
24 conclusion?

25 A That's my understanding of her deposition.

1 Q Is it possible --

2 MR. DARNELL: Excuse me. He wasn't
3 finished and you started talking. That's not polite.
4 Would you like to finish your answer,
5 Doctor?

6 THE WITNESS: Sure.

7 A That is what I understand her to have
8 testified.

9 MR. KEARNEY: Could I have the question
10 and answer read back, please?

11 (Testimony read back as follows:

12 "Question: It's your conclusion that at
13 that period of time she wanted to quit entirely, and
14 that's your conclusion?

15 "Answer: That's my understanding of her
16 deposition.")

17 BY MR. KEARNEY:

18 Q And you rely on her statement in her
19 deposition about her motivation in 1947?

20 A In part and on the context.

21 Q Pardon?

22 A On her testimony and on the context, that
23 includes Tony's testimony about that context.

24 Q You discount the possibility that in 1947
25 she simply wanted to cut down to a few cigarettes a

1 day?

2 A She -- if -- the fact, for example, that she
3 hid her smoking from her husband, that she acted
4 furtively and guiltily, says to me that she was
5 essentially experiencing a sense of failure,
6 difficulty and inability to quit.

7 And indeed I believe in her deposition
8 she testified to how difficult it was, so I think that
9 she was trying to quit.

10 Q Do you disagree with Dr. Jaffe in his
11 opinion that in 1947 she was not dependent on
12 cigarettes?

13 A Yes, I do disagree with that.

14 Q And what's your basis for that
15 disagreement?

16 A Let me see if I can explain it.

17 I believe that her continuing smoking,
18 the furtiveness, her description which seems to imply
19 smoking for the purpose of relieving withdrawal
20 symptoms, is consistent with continued dependence.

21 Further, her -- her rapid relapse and
22 quick rise to 20 cigarettes in the first 24 hours
23 speaks to continued dependence.

24 So I disagree with Dr. Jaffe's opinion
25 that she was not dependent during that time.

1 Q Do you -- is it your belief that she
2 continued to smoke 20 cigarettes a day or a pack a day
3 persistently after the delivery?

4 A What do you mean by persistently?

5 Q Every day.

6 A I couldn't guarantee every day, but most of the
7 evidence that I have suggests that she did.

8 Q So you don't know, though, that this
9 quick rise that you just referred to in your last
10 answer continued after the actual 24 hours of labor,
11 do you?

12 A Well, that is -- that's very different than
13 saying every day.

14 So she -- in fact, I believe this -- I
15 don't remember who was deposing her. I believe if it
16 was you, that you asked her and she indicated that she
17 did then go back to smoking 20 a day.

18 I'm also stating that even the ability
19 and actual behavior of smoking 20 that first day would
20 itself be an indication of continued dependence even
21 if she had known the next day.

22 Q If she was told that cigarette smoking
23 was dangerous to her health in the late 1940s would
24 she have been motivated to stop smoking?

25 MR. DARNELL: Told by whom?

1 MR. KEARNEY: Told by anybody.

2 A That may have motivated her to quit smoking,
3 particularly if she had been able to accept it.

4 Q Would she have been able to accept it?

5 A In '47? I think she -- she would have had some
6 difficulty accepting it as a result of her realization
7 of her difficulty or inability to quit.

8 Q Would she have been able to have made a
9 decision to stop smoking?

10 A What do you mean by make a decision?

11 Q Decide I want to stop smoking.

12 A As simply as that though?

13 Q Pardon?

14 A As simply as that?

15 Q Yes.

16 A Been able to state I want to smoking?

17 Q Would she have been able to do that?

18 A Yes, I believe she could.

19 Q Would she have been able to quit if she
20 wanted to?

21 MR. DARNELL: I object.

22 You haven't defined the term "want."

23 THE WITNESS: Right.

24 A I think --

25 Q Would she have been able to quit? I'll

1 drop out if she wanted to.

2 A If her -- if she had been able to grasp fully,
3 completely in this personalized direct way how it was
4 harming her health I think she may well have been able
5 to quit.

6 Q What do you mean by personalize in a
7 direct way how it would have harmed her health?

8 A I mean that there is a difference, just as
9 there is a difference in degrees of wanting to quit,
10 there is a difference in degrees of grasping the
11 health impact.

12 So that one can -- the degree to which --
13 there are -- there's variability in the degree to
14 which a person sees themselves at personal risk and,
15 therefore, personalizes the information in terms of
16 applying a statistical risk construct to themselves.

17 Am I making that clear?

18 Q So if Rose Cipollone's doctor told her in
19 1947 that cigarette smoking could endanger her, all
20 right, you're telling me that that would --

21 No. Withdraw that.

22 If Rose Cipollone's doctor told her in
23 1947 that cigarette smoking could endanger her health,
24 would she be motivated to stop smoking?

25 A Again, I have to answer the question in terms

1 of degrees; both degrees of motivation, particularly
2 because I believe in 1947 she was motivated to stop
3 smoking, and also in terms of degrees because it would
4 matter how her doctor told her and how she processed
5 and received the information.

6 Q Well, you studied her. You know, I'm
7 asking you. Don't tell me what matters, just tell me
8 what your opinion is.

9 Would she have been motivated to quit
10 smoking if her doctor told her in 1947 that cigarette
11 smoking could endanger her health?

12 A Would she be motivated, yes, I believe she
13 would.

14 Q Would she try to stop?

15 A I believe she did try to stop.

16 Q And would she be able to stop?

17 A I think if she had more fully than she did
18 grasped the health information and personalized it
19 that she might well have been able to stop at that
20 time.

21 Q How did she -- how much did she fully
22 grasp and personalize that information at that time in
23 1947?

24 A Not very much.

25 Q Pardon me?

1 A Not very much.

2 Q What's your basis for saying that?

3 A Well, she reports, for example, that firstly
4 the health information that was provided her at that
5 time she saw as being focused on the baby rather than
6 on her.

7 And she stated that it didn't produce --
8 she reports sensing that Tony was concerned, but not
9 personalizing it enough to become more concerned
10 herself.

11 She was somewhat concerned, she did seem
12 to hear -- she could report that she was told it, but
13 I don't believe that she was able to grasp it.

14 Q In the early '60s, all right, if she
15 believed --

16 MR. DARNELL: Now we're jumping ahead
17 many years.

18 Q If she believed that she could get lung
19 cancer from cigarette smoking would she have been
20 motivated to try to quit?

21 A Again, I need to qualify degrees and kinds of
22 belief.

23 I think that at that point she had
24 trouble believing it in part for two reasons.

25 In part because -- in large part because

1 being aware of her own dependence and difficulty
2 quitting made it hard for her to grasp and absorb that
3 information, and because she also was relying on other
4 information that minimized the risk in her eyes.

5 Q I'm asking you to assume that she did
6 believe that she could get lung cancer from cigarette
7 smoking.

8 Would that, Doctor, in your professional
9 opinion have motivated her to try to stop smoking?

10 MR. DARNELL: Before you answer that --

11 Is this an assumption that you believe is
12 based on fact or an assumption that you are asking him
13 as a hypothetical?

14 MR. KEARNEY: What difference does it
15 make?

16 MR. DARNELL: Because I think you have to
17 have a good faith bases for your question.

18 And if there were no facts to suggest
19 that she actually believed that, then I suggest that
20 that question is irrelevant and not appropriate to be
21 answered.

22 MR. KEARNEY: Are you going to direct him
23 not to answer?

24 MR. DARNELL: I didn't say that.

25 I'd like to know if you're representing

1 that your good faith bases are grounded in fact rather
2 than some conjecture on your part.

3 BY MR. KEARNEY:

4 Q Proceed with your answer.

5 MR. DARNELL: You haven't answered my
6 question, Mr. Kearney.

7 Are you representing that you have a good
8 faith bases for that based on the facts in this case?

9 MR. SIRRIDGE: If that's an objection to
10 form, Al, why don't you make it?

11 MR. DARNELL: I did.

12 MR. KEARNEY: Let's proceed.

13 MR. SIRRIDGE: Thank you.

14 MR. DARNELL: You can answer.

11
15 A If she had been able to fully weigh and
16 personalize the risk, I think she would have been
17 motivated to quit smoking.

18 Q Do you think that Mrs. Cipollone, or
19 rather let me put it another way.

20 Had she believed that she could get lung
21 cancer from cigarette smoking, could she have stopped
22 smoking? Was she capable of stopping smoking?

23 MR. DARNELL: Time frame?

24 Q Is a time frame important to that
25 question?

1 A Of course, yes.

2 Q Why is that?

3 A Because addiction often has a progressive
4 character and, therefore, it makes a difference when
5 it was based on what her experience had been with
6 smoking, and also on her experience with quitting.

7 Q Let's take the early to mid '60s. That's
8 the time frame for that question.

9 A Okay. And what's the --

10 Q The question is if she believed she could
11 get lung cancer from cigarette smoking, was she
12 capable of stopping, Doctor?

13 A I think by the late '60s it would have been
14 extraordinarily difficult for her to stop.

15 More likely than not she would have
16 failed.

17 Q Would it have been impossible for her to
18 stop?

19 A Psychologists rarely deal in impossibilities.

20 Q What about 1963, Doctor? Not the late
21 '60s. Same question, 1963.

22 A '63.

23 Q Would it have been impossible for her to
24 stop smoking?

25 A I --

1 MR. DARNELL: Just so we understand, the
2 question is would it have been impossible for Rose
3 Cipollone to stop smoking in 1963? Is that the
4 question?

5 MR. KEARNEY: That's not the question.

6 MR. DARNELL: Well, then I'm confused.

7 BY MR. KEARNEY:

8 Q The question is: Had she believed that
9 she could get lung cancer from cigarette smoking, from
10 her cigarette smoking, right, could she have quit
11 smoking in 1963?

12 A Again, I want to qualify that there are degrees
13 of belief, and so I'm a little uncomfortable using
14 that as though it were simple. If -- in '63 if she
15 had believed it, personalized it, would she have been
16 capable of quitting.

17 And you're positing that as a
18 contra-factual because I don't believe that she did
19 really grasp it. You want her -- you want me to
20 assume that whether I think it's true or not?

21 Q Does your answer change, Doctor, whether
22 it's a contra-factual hypothetical or actual
23 hypothetical, does your answer change?

24 A No. I just want to be sure that you're clear
25 about the assumptions on which I'm answering so that

1 our assumptions don't differ and you don't
2 misunderstand my answer.

3 I think it would have been
4 extraordinarily difficult for her, but possible.

5 Again, you're asking me to characterize
6 things as possible or impossible and that's not -- not
7 how we tend to operate.

8 Q Was it extraordinarily difficult for her
9 to quit in 1981?

10 A Apparently yes.

11 Q Was it extraordinarily difficult for her
12 to quit in 1947?

13 MR. DARNELL: You're assuming she did
14 quit. And the Doctor's testified she didn't quit
15 based on his understanding of the facts, so I think
16 that your question is not proper.

17 Q Was it extraordinarily difficult for her
18 to cut down to a few cigarettes a day in 1947?

19 A She indicates that it was very difficult in
20 1947.

21 Q So even though it was extraordinarily
22 difficult for Rose Cipollone, she could, in fact, stop
23 smoking cigarettes. You agree with that?

24 A She didn't stop.

25 Q Pardon me?

1 A She didn't stop in '47.

2 Q She stopped in '82, didn't she?

3 A Part of what goes into the motivational
4 equation is not only how difficult it is and how
5 you -- but also what -- what kind of gun is being held
6 to your head.

7 The fact that at that time she had had
8 parts and then a whole of the lung removed essentially
9 overcame that difficulty.

10 Q So she did not have extraordinary
11 difficulty in quitting smoking?

12 A No, I didn't say that.

13 I said it was difficult but she was able
14 to do it at that time.

15 Q All right.

16 A In fact --

17 Q Now, when you say it would be
18 extraordinarily difficult for her to have stopped in
19 '63 under the hypothetical -- withdrawn.

20 Can you describe just how difficult it
21 would have been for Rose Cipollone to stop smoking in
22 1963 had she been aware, had she believed that she
23 could get lung cancer from cigarette smoking?

24 A If I may, perhaps I can use her own words
25 because I think she talked about that.

1 MR. DARNELL: Go ahead.

2 Q Let me ask you this question before --

3 MR. DARNELL: You've asked your question.

4 Are you now abandoning the question or do
5 you want him to answer it before he starts checking
6 what he thinks he has to check to answer it?

7 Are you abandoning the question? And if
8 so, you can put that down. If you're not abandoning
9 the question I think he's entitled to know.

10 MR. KEARNEY: I'm abandoning the question

11 Q As an expert in this field, Doctor, am I
12 correct that you cannot answer my last question
13 without looking to see what she said in her
14 deposition?

15 A I think it's relevant to --

16 Q The only way you can articulate --

17 A Let me finish.

18 Q -- the degree of difficulty in --

19 MR. DARNELL: Now wait a minute. Excuse
20 me.

21 Q -- her stopping smoking in the early '60s
22 is by looking at what she said in the deposition after
23 this case began; is that correct?

24 MR. DARNELL: You know, we're now getting
25 to the point where you're -- he started to answer it

1 and you started -- you cut in on his answer with a
2 third question and that's not fair.

3 Now, he's not going to say anything until
4 you -- you're not going to say anything until he
5 answers your second question unless you've abandoned
6 that, too.

7 I think it's unfair for you to keep
8 asking questions, he starts to answer it, you think
9 better of it and you ask a third question in the
10 middle of his answer.

11 And I think -- so we'll allow the Doctor
12 to collect his thoughts. Given what I foresee as a
13 harassment process at this point, we're taking five
14 minutes and then we'll start again because I don't
15 think this is fair. We're taking a five-minute break.

16 If you want to ask him -- if you want him
17 to answer questions, let him answer it before you
18 start asking your next one. We're taking five.

19 MR. KEARNEY: Mark the time at 3:10.

20 (Recess from 3:10 to 3:15 p.m.)

21 MR. KEARNEY: Can we go ahead?

22 MR. DARNELL: Yes.

23 BY MR. KEARNEY:

24 Q Dr. Shiffman, did you just have any
25 discussion with Mr. Darnell during the course of this

1 last break?

2 A Yes.

3 Q Tell us what was said by him and what was
4 said by you.

5 A He said that I ought to just answer the
6 questions, not be intimidated. That -- not allow
7 myself to have my statements kind of turned around.
8 To try to be clear about what I was saying.

9 Q What else did he say?

10 A That was about it.

11 Q Did you talk at all about the subject
12 matter of testimony that you were just covering?

13 A No.

14 Q Let's go back now.

15 In 1963, 1964 had she believed that
16 cigarette smoking could cause her lung cancer --

17 A Uh-huh.

18 Q -- would she have been motivated to try
19 to stop?

20 A Again, let me say that it depends in part on
21 the degree of personalization of the belief.

22 But had she believed it completely, yes,
23 I think she would have been motivated to stop.

24 Q Having been so motivated would she have
25 been able to stop?

1 A I think it's likely. Again, it would have been
2 extraordinarily difficult, but I think she probably
3 would have been able to.

4 Again, I want to make it clear that I'm
5 uncomfortable dealing in absolutes.

6 Q Describe, Doctor, what you mean by
7 "extraordinarily difficult" in that last answer.

8 A I mean that it would have caused her
9 substantial distress and that the probability of
10 success would have been low.

11 Q Tell me what the probability of success
12 would have been.

13 A I can't put a number on that.

14 Q Would it have been -- can you give me a
15 range, Doctor?

16 A It would have been low. That is the range.

17 Q Now, I'm really -- frankly, I don't
18 understand what you're doing.

19 I thought you just told me she would have
20 been able to stop but it would have caused her great
21 difficulty.

22 A Right.

23 Q Now you told me she had a low probability
24 of stopping.

25 Would she have been able to stop with

1 that belief in the early '63, '64 period, yes or no?

2 A It's not a yes or no answer.

3 MR. DARNELL: Doctor, if you can't answer
4 it yes or no, don't answer it yes or no.

5 A That's what I was going to say. It's not a yes
6 or no question.

7 I think -- I want to acknowledge that
8 there was a -- some chance she would have succeeded.
9 It would have been difficult. It would not have been
10 easy. And I mean by that, both that it would have
11 been experienced as very difficult and that the
12 probability of success would have been low.

13 Q So you're saying more probably than not
14 she would not have stopped in 1963 had she believed
15 that cigarette smoking could cause her lung cancer,
16 she would not have been able to stop smoking?

-17 A Again, I think she might have been able to. I
18 think it would have been difficult.

19 I think it would -- it would not have --
20 it wouldn't have been a high probability of success.

21 Perhaps 50 percent is a reasonable one
22 but, again, you're asking me to cast things in a
23 term -- in terms of specific numbers that are just not
24 reasonable.

25 Q Tell us what distress she would have had.

1 Describe it to us, if she, so motivated, tried to stop
2 in 1963 and 1964.

13
3 A I think it's likely that she would have felt
4 acutely uncomfortable. I think it's likely that she
5 would have experienced strong cravings and urges to
6 smoke. I think it's likely that she would have had
7 difficulty concentrating, that she may well have
8 suffered sleep disturbance, and that it would have
9 been a -- she would have found herself reaching for a
10 cigarette even when she didn't want to; that is, that
11 it would have been extraordinarily hard for her not to
12 smoke.

13 Q Is that any different than the distress
14 that she experienced in 1947 when she, as you say, cut
15 down?

16 A Well, indeed, because she didn't stop, she --
17 she used cigarettes in such a way apparently to
18 minimize her distress. She -- so she reports having
19 experienced some distress. I think she minimized it
20 by smoking.

21 And also, I think that in '47 that her --
22 her potential for distress may have been less because
23 she hadn't been smoking as long.

24 Q Was that distress that she would have
25 experienced in '63 or '64 any different than the

1 distress she experienced in 1981 and '82 when she
2 attempted to stop?

3 A That's hard to know. The situation was very
4 different than '81 and '82 in that she was seriously
5 physically ill and specifically had had a lung, first
6 a part of a lung and then a whole lung removed as a
7 result of smoking. And I think that would have helped
8 her overcome that distress.

9 Q So you think the distress of stopping
10 smoking in '81 and '82 was less than the distress that
11 she -- during the time -- well, withdrawn.

12 You think that the distress that she
13 personalized in '81 and '82, in your experience, was
14 less than that what she would have experienced in '63
15 and '64; is that what you're saying?

16 A Let me be sure I understand.

17 Q Pardon?

18 A Let me be sure I understand that so I can
19 respond to it.

20 Q Okay.

21 A That's hard to know. I think her distress may
22 have been equal but her motivation was much higher.
23 It would have had to be much higher in '81, '82.

24 Q If she had been advised in 1942 that
25 there were health hazards associated with cigarette

1 smoking, let's say 1943 instead of '42, would she have
2 been motivated to stop smoking?

3 A Let me just check where '43 falls in her
4 smoking history.

5 Q Fine.

6 (Witness reviews.)

7 MR. DARNELL: When you ask that question,
8 do you mean in the absence of any information that
9 might be positive towards smoking, that's the only
10 information out there, or that information plus
11 whatever else we know there was about smoking in fact
12 during that time?

13 MR. KEARNEY: Mr. Darnell, I am very used
14 to your coaching the witness.

15 The Doctor may not be, so would you like
16 him, to have that read back to him?

17 MR. DARNELL: Sure. Read it back.
18 Because it wasn't coaching, it was a legitimate
19 question about your question.

20 MR. SIRRIDGE: But you're not sworn in,
21 Alan. No one cares whether you understand the
22 question.

23 MR. DARNELL: His question does not
24 mirror reality and, therefore, I think it's an
25 appropriate objection to the type of question.

1 And if you don't like it you can stop the
2 deposition but --

3 MR. SIRRIDGE: Well, then make the
4 objection. It's just called objection to form. Is
5 that a hard concept to understand, Alan?

6 MR. DARNELL: Apparently it is because I
7 don't agree with your objection to form concept.

8 MR. KEARNEY: Let me just say, because
9 this is going on a little bit too much, the magistrate
10 in this case has expressed his views on how objections
11 should be made. You may not be familiar with them
12 because we just haven't worked very much together in
13 the case.

14 And let me tell you, his view in essence
15 is that he just wants objections to be stated, no
16 argument, and he will not be happy if this is
17 presented.

18 BY MR. KEARNEY:

19 Q Can we have an answer to the question?

20 A Can you read back the question because I'm lost
21 ~~now~~.

22 MR. SIRRIDGE: Read back the question.

23 (Question read back as follows: "If she
24 had been advised in 1942 that there were health
25 hazards associated with cigarette smoking, let's say

1 1943 instead of '42, would she have been motivated to
2 stop smoking?")

3 A If she had been advised and truly believed it,
4 I think she would have been motivated.

5 Q If she had -- let me add something
6 because I think it's very important.

7 That in 1943 my understanding is that she
8 initiated smoking in '42 and that there was a period
9 of acceleration in 1943, so that's a very, what do I
10 want to say, eventful period.

11 Doctor, do you know what she believed in
12 1942 about the health hazards of cigarette smoking?

13 A Let me consult my notes if I may.

14 (Witness reviews.)

15 A Her testimony regarding that period emphasizes
16 the social attractiveness of smoking.

17 She doesn't say much about any deep
18 understanding of the health hazards, and so I think
19 it's more likely than not that she didn't understand
20 them well.

21 Q And that's your opinion in this case --

22 A Yes.

23 Q -- that she did not understand that there
24 were health hazards with cigarette smoking in 1943?

25 A No. What I said was she didn't understand them

1 well. Again, I don't -- I don't think that belief and
2 understanding are dichotomous, yes/no sort of
3 concepts, particularly as regards to motivating
4 behavior change.

5 Q Well, tell us what you believed and
6 understood about the hazards of cigarette smoking in
7 1943.

8 A Well, I want to answer you accurately and so,
9 again --

10 Q If you know, Doctor.

11 A -- go back to her deposition.

12 Q If you know.

13 A I want to answer --

14 Q Let me withdraw the question.

15 Do you know what Rose Cipollone
16 understood and believed about the health hazards of
17 cigarette smoking in 1943?

18 A Okay. It is my understanding -- again, let me
19 say that I would prefer to go back to the raw data, as
20 it were, so that I can give you an accurate answer.

21 But I believe that she was not fully
22 cognizant of the -- of the health hazards of smoking
23 at that time and indeed, very few people were.

24 Q What is the raw data that you just
25 referred to in that answer that you would have to go

1 back to?

2 A I would need to look at her deposition and, you
3 know, I've read literally thousands of pages of
4 testimony. I would want to see exactly what she was
5 asked and what she said about it so as to make my
6 opinion as accurate as possible.

7 Q Other than looking at what she said in
8 her deposition to -- let me withdraw that.

9 Is that the only way, Doctor --

10 A No.

11 Q -- or the only support for your opinions
12 about what she believed and understood about the
13 health hazards of cigarette smoking in 1943?

14 A No, it is not.

15 Q What other bases or support do you have?
16 What other data do you have?

17 A The other kinds of information that would be
18 relevant would be what information was generally
19 available and believed by the public. That would be
20 relevant.

21 Q Have you looked at that?

22 A Not closely, but it's my understanding that at
23 that time there was very little widely known
24 information about the health hazards.

25 Q What's your basis for that statement?

1 A Having interviewed very many smokers who
2 started during that time would be one basis.

3 Q Anything else?

4 A Also, I know that even after there was
5 obviously a lot more publicity about the people's
6 understanding and belief and acceptance, it was still
7 incomplete. And, therefore, it's a reasonable
8 inference that when less public information was
9 available, belief would have been even less.

10 And finally, that even after more
11 information was -- was available, that teenagers in
12 particular tend not to fully grasp and personalize
13 that information.

14 Q In 1946 if she were told that cigarette
15 smoking was bad for her health would she have been
16 motivated to stop smoking?

17 A Let me just repeat that the issue of being
18 told, it would depend very much on what she was told,
19 how she was told and what she believed.

20 So from just being told, that's not --
21 that's not enough information.

22 Q If she was told that by her husband?

23 A It would depend very heavily on what she was
24 told, how she was told it, what else, what other
25 sources of information she was relying on, et cetera.

1 Q When the warning statement came on the
2 cigarette packages in 1966, was that something that
3 would have motivated Mrs. Cipollone or did motivate
4 Mrs. Cipollone to try to stop smoking?

5 A I think at that time had she been able to fully
6 grasp it, it would have.

7 However, as I've explained I think that
8 she to some extent was unable to grasp that
9 information and to personalize it, and indeed she
10 found ways to rationalize it, to focus on other
11 statements that made the information questionable.

12 And that was in part because realizing
13 how dependent she was on smoking made it
14 psychologically difficult to grasp and accept that
15 information and personalize it.

16 Since she felt incapable of acting, it
17 was hard for her to grasp the information that would
18 have motivated that action.

19 Q In 1947 was she capable of personalizing,
20 grasping and accepting a health message about
21 cigarette smoking and lung cancer?

22 A To some extent. Not completely.

23 Q She was not; correct?

24 A No, I didn't --

25 Q She was --

15
1 A I said -- I'll say again that I think that
2 these things are matters of degree, and except by a
3 slip of the tongue I'm not going to be able to give a
4 yes or no answer.

5 Q Now, when you say they're matters of
6 degree, explain to us the degrees by which you
7 characterize -- quantify the characteristic of being
8 unable to personalize information. Explain the
9 degrees to me.

10 A I don't grasp the question.

11 Q All right. You say it's a matter of
12 degrees --

13 A Yes.

14 Q -- the extent to which somebody can
15 personalize a health message.

16 A Right.

17 Q Right?

18 I want you to describe for us what those
19 degrees -- how do you characterize those degrees?

20 A Well, for example, one might be aware that some
21 people say smoking is harmful to you but have doubts
22 about it. That would be one degree.

23 One might, for another example, even
24 believe that smoking is harmful to some people but not
25 believe it about one's self. That would be another

1 degree.

2 One might think that the risk to one's
3 self is very small.

4 The ultimate would be I suppose to
5 realize that you personally are going to die as a
6 result of smoking.

7 And I believe when she had that
8 realization she did quit.

9 Q And what are the degrees -- is it the
10 same -- other than these kind of anecdotal things you
11 can't give you. I'll withdraw that.

12 A Thank you.

13 Q What are the degrees of grasping and
14 acceptance?

15 You said those are a matter of degrees.
16 Explain that to me.

17 A That is what I was trying to explain.

18 Q Okay. Same as the personalizing stuff?

19 A Well, actually let me add something because
20 there is more in there.

21 Part of that process is also making the
22 information very specific and concrete.

23 So, for example, when you talk to people
24 they can sometimes describe to you that smoking is bad
25 for them, but they're unaware or haven't fully grasped

1 that it causes lung cancer, how fatal lung cancer is
2 and so on.

3 So those are -- that's a level of detail
4 that gets filled in as a person moves through that
5 process as well.

6 Q By the way, Doctor, people can quit
7 smoking without having grasped, accepted and
8 personalized a specific health consequence of smoking
9 to them; isn't that right?

10 A For dependent smokers that would be very
11 unlikely.

12 Q Can dependent smokers stop smoking?

13 A Yes.

14 Q Have dependent smokers ever stopped
15 smoking?

16 A Yes. Some dependent smoke --

17 Q And stop smoking permanently?

18 MR. DARNELL: Excuse me. One at a time.
19 You're stepping on his answer. Please let him finish.

20 You want to repeat the question, please?

21 Could we hear the question again, please,
22 because I think we -- we've been hearing two channels
23 at once there.

24 Q Do you agree with Dr. Jaffe when he said
25 that dependent smokers can stop smoking?

1 A Yes, I believe some dependent smokers can stop
2 smoking. Indeed Rose Cipollone stopped smoking when
3 she was dying.

4 Q Do you agree that millions of dependent
5 smokers have quit smoking?

6 A I believe millions of smokers have quit smoking
7 and I believe many of them were dependent.

8 Q Do you believe that millions of dependent
9 smokers have stopped smoking? And I'm going to ask
10 you to answer the question.

11 MR. DARNELL: Well, I think he did
12 but -- now you can answer it again.

13 A Okay. I want to be careful.

14 There are no studies that have assessed
15 the dependence of those smokers who have quit.

16 There are studies that show that those
17 who are able to quit are generally less dependent or
18 not dependent.

19 Nevertheless, I'm trying to be clear and
20 responsive. Many people, indeed millions have quit
21 and many of those are likely to have been dependent.

22 A dependent smoker was less likely to
23 quit. And I don't know of any firm data on the
24 percentage of those people who are dependent, except
25 to say that it's the less dependent people who quit

1 and are successful at quitting.

2 Q Now, all these people who quit, does
3 every single one of them -- has every single one of
4 them personalized, grasped and accepted the health
5 consequences of cigarette smoking?

6 A I believe many or most have.

7 Q All right. Is it possible, possible,
8 that one of them did not personalize, grasp and accept
9 the health risks of cigarette smoking?

10 MR. DARNELL: Was that meant to be a
11 serious question?

12 MR. KEARNEY: Sure it is. Absolutely it
13 is.

14 A I believe that for a dependent smoker to
15 successfully quit smoking they would need to have a
16 very compelling personal motivation which typically
17 would be having to grasp the health risks to
18 themselves.

19 MR. DARNELL: Can we just hold it up for
20 a second.

21 (Interruption for phone call.)

22 Q You think that that's necessary in order
23 to successfully quit?

24 A Some intense motivations, yes, I do.

25 Q All right. Would you -- would it be fair

1 to say that in order to quit the motivation to quit
2 has to be greater than the motivation to continue
3 smoking?

4 A It's not how I would characterize it.

5 I'd say there has to be great motivation
6 but it's not -- are you counting dependence as a
7 motivation to continue smoking?

8 Q I'm counting a craving, desire, wish,
9 want.

10 A Dependence, if we count dependence then I do
11 think the motivation has to be stronger than the
12 motivation to continue.

13 Q Let's not count dependence.

14 Do you think the motivation to quit has
15 to be stronger than the motivation to --

16 A That's an unanswerable question because
17 dependence is an important part of the motivation.
18 It's the major motivation to continue smoking.

19 Q Okay. So am I correct that you believe
20 that in order to successfully quit a dependent smoker
21 has to have personalized the health aspects or
22 consequences of cigarette smoking; is that correct?

23 A Or to have otherwise developed very intense
24 motivation.

25 Q Intense motivation outside of health

1 concerns; is that right?

2 A That's possible.

3 Q So they've got to know, in order to quit
4 they've got to -- specifically what do they have to
5 know in order to quit?

6 A Again, I want to be sure that I'm making myself
7 clear that it's not just a matter of knowing, but
8 rather of personally realizing not only cognitively,
9 but to some extent emotionally that they personally
10 are at risk, that they may die.

11 Q And that's -- that is all they've got to
12 know --

13 A No.

14 Q -- in order to be able to be motivated to
15 quit?

16 A I didn't say that.

17 Q Is that correct?

18 A I didn't say that.

19 Q Well, what is it that they have to know
20 and accept, Doctor?

21 MR. DARNELL: Again, Counselor, you're
22 cutting him off in the middle of an answer. Please.
23 You're not letting him finish his answer.

24 Were you finished?

25 THE WITNESS: No.

1 A Again, I'm uncomfortable with your
2 characterizing it as knowing as though it were
3 something you simply read on a page.

4 I think it's a direct personal
5 realization that then becomes motivating. And that
6 includes the realization of personal risk in detail.
7 That is the most common and important motive for
8 quitting smoking.

9 Q Tell me, if a person knew that the
10 lifetime risk of them getting lung cancer from smoking
11 cigarettes was 1.4 percent, would that be sufficient
12 to motivate them to stop smoking?

13 A Again, let me reiterate I think the key issue
14 would be whether the person experiences a direct
15 personal sense of risk and harm.

16 If that -- if a person was able to grasp
17 from that information that they were personally at
18 risk and might die of lung cancer, then that could
19 serve as a motivational basis for getting them to quit
20 smoking.

21 You know, of course, too, that heart
22 disease is, if anything, more common in people who are
23 smokers. So that information would play an important
24 role as well.

25 Q If a person were told that there was a

1 five percent chance that they would get lung cancer,
2 that they would get lung cancer from the cigarette
3 smoking after a lifetime of cigarette smoking, would
4 that in your opinion be sufficient to motivate them?

5 A Only if it led them to feel personally at risk.

6 Q And you have no opinion on what is
7 necessary to lead a dependent smoker to conclude that
8 they are personally at risk; is that right?

9 A No. I didn't say that.

10 Q All right. Well, then answer my
11 question.

12 A I thought I did.

13 Q If a dependent smoker were told that
14 there was a five percent chance that they would get --
15 that they would get lung cancer from a lifetime of
16 cigarette smoking --

17 A Uh-huh.

18 Q -- would that be sufficient motivation
19 to -- or would that be sufficient information to lead
20 to what you call personalized motivation to quit?

21 A It would depend on how the information was
22 presented, the degree of certainty and, again, while
23 you're focusing on the absolute risk of lung cancer, I
24 think there's other information such as the relative
25 risk and the risk of heart disease and, again, the

1 degree to which the person absorbed the information
2 and found they themselves personally to be at risk.

3 So for example, if someone believed that
4 smoking low tar and nicotine cigarettes shielded them
5 completely from that risk, then telling them that
6 information would not be sufficient if they could then
7 say well, yes, that's true for those people over
8 there, but not for me.

9 Q Could you, Doctor, or rather when you
10 quit did you personalize health information?

11 A Uh-huh. Yes.

12 Q And what was your understanding of the
13 health risks of cigarette smoking when you quit?

14 A I had a -- what I think was a -- a fairly deep
15 and sophisticated understanding of them since I was by
16 that time studying the field, and I came to realize
17 that it was likely I would die as a result of smoking
18 if I continued.

19 Q What would Rose Cipollone need to have
20 been told, and by whom, in 1963 to sufficiently
21 motivate her to stop smoking?

22 A In '63. She would have had to have an
23 unambiguous message; that is, not a mixed message that
24 some people think that smoking is bad for you but
25 others don't and we're not sure.

1 So the message would have had to have
2 been unambiguous and in essence -- that's the
3 unambiguous. She would have had to be told that her
4 smoking in particular put her at risk.

5 Let me recall what she was smoking in
6 '63. That even though she had switched to filtered
7 cigarettes at that time, that that did not protect
8 her. And again, she would have had to hear that
9 unambiguously, clearly, not a mixed message.

10 Q So she would have to be told --
11 withdrawn.

12 The message has got to be unambiguous,
13 but I don't know that you've told us what the message
14 was.

15 What message had to be unambiguous that
16 would have motivated her to try -- to quit smoking?

17 A The message would have had to be that it was
18 likely that she would lose health and life as a result
19 of smoking as she was smoking.

20 Q And had she gotten that message, it's
21 your opinion that more probably than not she would
22 have been motivated to quit and she would have quit?

23 A Let me try to respond to that as best I can.

24 Firstly, I think the way you
25 characterized it I just want to amplify that had she

1 gotten the message, that is, gotten it in the sense of
2 grasped it and personalized it, she would have been
3 motivated.

4 And indeed at that time I think she was
5 motivated. She reports that she tried to cut down.
6 Again, that was based on an understanding that cutting
7 down would protect her.

8 Had she -- it would have made it more
9 likely that she would have quit had she been able to
10 grasp her personal risk and overcome her belief that
11 she could -- that she was protected by, whether it was
12 smoking filters, cutting down, et cetera.

13 Q It's your understanding that in the 1960s
14 she believed she was protected from risk by smoking
15 filtered cigarettes?

16 A I think that's more likely than not.

17 Q Did she believe -- did she believe during
18 that whole period of the 1960s that she was protected
19 completely, by that I mean from all risks and health
20 hazards associated with cigarette smoking?

21 Is that your understanding?

22 A No. I didn't say completely or from all risks.

23 Again, these are matters of degree and to
24 the extent -- it's -- parts of the process are
25 analogous to a legal process.

1 If she had in her mind issues which
2 raised reasonable doubt, if you will, that would have
3 made her not believe it as well and she would have
4 experienced some protection.

5 Q All right. Tell me, just so I understand
6 it, it's your testimony that in the '60s she believed
7 that smoking filters reduced her risk but didn't
8 eliminate it; is that right?

9 A I think it's likely that she experienced some
10 sense of protection from the health risk by virtue of
11 smoking filters.

12 Q So she understood that there was still
13 some risks. Is that what you're saying?

14 A Let me come back to it's a matter of degree of
15 belief.

16 And you're trying to separate what she
17 believed and make her believe one thing with certainty
18 and another one weakly, and I am trying to
19 characterize belief as a matter of degree.

20 Q All right. I'm not concerned about the
21 degree of belief.

22 A I am.

23 Q I'm concerned about the object, okay.

24 Did she believe, Doctor, that by smoking
25 cigarettes she eliminated all risk or she just reduced

1 the risk? And I'm not asking a question about degrees
2 of belief.

3 MR. DARNELL: Smoking? I'm sorry. I
4 missed something.

5 What kind of cigarettes? Filtered
6 cigarettes? I missed something in the question. Can
7 I hear it again, please

8 MR. KEARNEY: I'll restate the question.

9 Q Did she believe in the 1960s that by
10 smoking filtered cigarettes she reduced her risks or
11 did she believe by smoking filtered cigarettes that
12 she eliminated all risks of cigarette smoking?

13 A I don't think that that's a distinction she
14 would have made, and I see that as part of the matter
15 of degree that we are talking about.

16 Q I guess I'm asking you the question,
17 though. Mrs. Cipollone is not here to ask her that
18 question.

19 A I understand that.

20 Q Is your opinion --

21 A You are asking me to characterize her belief,
22 and that's what I'm doing. I'm saying that her belief
23 was a matter of degree and acceptance of those
24 beliefs.

25 You're asking me to characterize her, not

1 what I believed in '63.

2 Q Had she been told in 1953 --

3 A '53?

4 Q '53, yes.

5 A Okay.

6 Q -- that it had not been proven that
7 cigarette smoking caused lung cancer but there was a
8 suspected link, would that have motivated her to try
9 to stop smoking?

10 A I think it would have had some motivational
11 relevance, but I think, in fact, the way you phrased
12 it would have tended to diffuse its motivational
13 relevance, particularly in light of her dependence at
14 that time.

15 Q By diffusing its motivational relevance
16 could you --

17 A It would reduce --

18 Q -- what does that mean?

19 A It means it would reduce the degree to which
20 the information was relevant, was motivating.

21 Q By reducing the degree to which the
22 information was relevant, what does that mean?

23 A No. I mean it would reduce the degree to which
24 the motivation -- the information was motivating given
25 that it is -- the statement you made is stated in such

1 an ambiguous way.

2 Q So it would have made it less likely that
3 she would have quit if she were told that; is that
4 right?

5 A As opposed to being told that she, you know,
6 that she was at risk that there was substantial
7 evidence? Yes, if you say yes, there may be some
8 risk.

9 Q Would that have increased the likelihood
10 that she would quit?

11 A Would what have?

12 Q Let me withdraw that. Let me withdraw
13 that.

14 That type of a message, Doctor, would
15 that increase the likelihood that she would quit over
16 no message at all? Do you understand my question?

17 A Yes. In other words, if everyone was going
18 around saying smoking is absolutely not bad for you.

19 Q Nobody was saying anything at all.

20 Would a message that it has not been
21 proven that cigarette smoking caused lung cancer but
22 there is a suspicion of a link between cigarette
23 smoking and lung cancer, would that have increased
24 her -- well, I'll withdraw the question. I'm even
25 confused.

1 A Good thing.

2 Q In 1955 if she were told that cigarette
3 smoking should be viewed with suspicion as a possible
4 caus --

5 A Can I raise something?

6 Q Causative agent. Let me finish the
7 question.

8 -- as a possible causative agent of lung
9 cancer, would that have increased --

10 A I'm sorry. I didn't hear it.

11 Q As a causative agent of lung cancer,
12 would that have increased -- would that have motivated
13 her to try to stop smoking?

14 A Relative to what?

15 Your earlier question was relative of --
16 relative to there being no information.

17 Q Well, you know what information she had
18 in the '50s, right?

19 A No.

20 Q You don't?

21 A Not in detail.

22 I'm confused because there are two
23 questions you asked.

24 One was relative to there being no
25 information and now you're saying relative to what was

1 actually out there.

2 Q Relative to what was actually there.
3 Relative to what you understand was her awareness and
4 belief with respect to cigarette smoking and risk of
5 cigarette smoking.

6 A I'm really sorry, but I'm -- now I'm lost.

7 Q Okay.

8 MR. DARNELL: Let the Doctor go to the
9 men's room.

10 We'll take a few minutes, five minutes
11 and we'll resume.

12 (Recess taken from 3:50 to 3:55 p.m.)

13 Q What would Mrs. Cipollone have to have
14 been told in the '50s, in the period of the 1950's in
15 order to have motivated her to try to quit and
16 successfully quit?

17 A What's the period again?

18 Q 1950's.

19 A Okay. All of the '50s?

20 Q Right.

21 A Because a lot happened during that --

22 Q Pardon me?

23 A Because I assume --

24 Q You can break that period up if you
25 choose to. If it's relevant to your answer, go right

19
1 ahead.

2 A All right. I think she would have had to have
3 been told that it was likely that smoking was
4 dangerous and that it might be linked to lung cancer.
5 That she might -- there was some reason to believe she
6 might get lung cancer as a result of smoking.

7 And I think it's also relevant, you're
8 asking me what she -- that would have to be told to
9 her in the absence of information saying that it's
10 probably not risky, in the absence of information
11 portraying it as not risky.

12 In other words, it's not just what one
13 message is but the context I talked earlier about
14 mixed messages.

15 Q It would have to be unambiguous; correct?

16 A Yes.

17 MR. DARNELL: Off the record.

18 (Discussion off the record.)

19 Q Would have to be unambiguous, right?

20 A It would have to -- it would have to be an
21 accurate representation of the scientific evidence.
22 It can't -- wasn't to be made up based on what was
23 unknown at the time.

24 Q But if the scientific evidence was itself
25 ambiguous would that be sufficient to have motivated

1 her to quit and -- motivated her to try to quit and
2 quit successfully?

3 A I'd need more information about exactly what
4 the state of the science was at the time.

5 That's really not my -- my area of
6 expertise. If you --

7 Q Okay. So what you just told us, however,
8 would not be sufficient to motivate Mrs. Cipollone to
9 stop smoking in the '50s?

10 A I'm sorry. I lost the reference.

11 Q I'll give you the reference.

12 Okay. You just said that she would have
13 been motivated to stop smoking, to try to quit and she
14 could have quit successfully had she gotten an
15 unambiguous message that smoking was likely to be
16 dangerous, might cause lung cancer, and that she had
17 reason to believe that she might get lung cancer.

18 A What are you asking?

19 Q All right. That's what you told us.

20 Now, would that have been sufficient to
21 motivate her to try to stop smoking and to quit
22 successfully had there been other information
23 available in the newspapers that created ambiguity
24 about the health risks of cigarette smoking?

25 A I think it -- okay. I think the ambiguity

1 would have tended to weaken the message.

2 Q So that if she was told in '53, for
3 example, that it had not been proven that cigarette
4 smoking caused lung cancer, that would increase the
5 ambiguity and make it less likely that she would be
6 motivated to stop smoking; is that correct?

7 A It depends to some extent on the balance of
8 what she was told and what reassuring and doubting
9 messages she was getting along with messages that she
10 was getting about the risk, and also would have to do
11 with the degree to which she personalized it.

12 Q Now, do all dependent smokers who have
13 successfully quit smoking, have they all received and
14 accepted an unambiguous message of cigarette smoking
15 and health?

16 MR. DARNELL: I'm going to object to that
17 because I think that was asked and answered oh, about
18 45 minutes ago.

19 MR. KEARNEY: What was the answer, Alan?
20 I don't remember.

21 MR. DARNELL: I'm not going to portray
22 it, but I do remember the question.

23 You can answer it again.

24 A Okay. I think it's likely that many of them
25 would have accepted that information and personalized

1 it in some way.

2 I couldn't go to the degree of certainty
3 that you're asking for, which is that all of them
4 have.

5 Q Okay. So --

6 A And what time period are we talking?

7 Q I'm talking say in the 1950's, for the
8 dependent smoker who stopped smoking in the 1950's was
9 it necessary for them to be -- to be sufficiently
10 motivated to quit that they received an unambiguous
11 message about the health consequences of cigarette
12 smoking?

13 A It would have been one element in the equation,
14 but one would have to look at their degree of
15 dependence, other motives they may have had for
16 quitting.

17 Q So it's not -- the ambiguity of the
18 message is not essential or necessary to create
19 motivation, sufficient motivation to quit?

20 A I lost you because you're saying ambiguity.

21 Q You keep saying that Mrs. Cipollone
22 needed an unambiguous message, right?

23 A That's correct.

24 Q And I'm asking you in your opinion do all
25 dependent smokers in order to stop smoking need an

1 unambiguous message? Is that your opinion?

2 A I think to be motivated, dependent smokers need
3 to come to accept their personal risk.

4 Again, that has to be weighed against the
5 degree of dependence in that getting an unambiguous
6 message is part of the process leading them to accept
7 it. It's not the only thing.

8 Q So that what you're saying is that people
9 who get an unambiguous message can still be motivated
10 to quit?

11 A An unambiguous message?

12 Q An ambiguous message can still be
13 motivated to quit, right?

14 A They might be able to work their way through
15 the ambiguity. It would be less likely than from an
16 unambiguous message.

17 Q When you say "work their way through the
18 ambiguity," what do you mean?

19 A I mean that they might -- well, let me give you
20 an example.

21 As given my training I'm more able to
22 evaluate statistical ambiguity and statistical risk
23 information, and I -- therefore, I'm gonna have
24 better -- be able to better reach a conclusion from
25 ambiguous premises.

20

1 Q Isn't by its very nature statistical risk
2 information ambiguous?

3 A It's uncertain.

4 Q And uncertain means ambiguous; correct?

5 A I'm uncomfortable characterizing it that way.
6 That there's a point at which statistical evidence is
7 enormously compelling even though it is not the same
8 as nonstatistical direct evidence.

9 Q Well, the message cigarette smoking, a
10 lifetime of cigarette -- smoking cigarettes, a risk of
11 five percent chance of lung cancer from cigarette
12 smoking by its very nature that's an ambiguous,
13 uncertain message, isn't it?

14 A No. It seems to be a pretty clear statement.

15 Q The message cigarette smoking might cause
16 lung cancer, is that an ambiguous or an unambiguous
17 message?

18 A That could be construed as an ambiguous
19 message. It doesn't --

20 Q Cigarette smoking might be a cause of
21 lung cancer, is that an ambiguous or an unambiguous
22 message?

23 A Let's say it is more ambiguous than saying
24 cigarette smoking is a cause of lung cancer.

25 Q Would you characterize it, however, as an

1 ambiguous or an unambiguous message?

2 MR. DARNELL: If you can answer it that
3 way, answer it.

4 A Yeah. Again, I'm trying -- you're acting as
5 though that is unambiguous, that things are ambiguous
6 or not usual. There are degrees of uncertainty in
7 ambiguity.

8 Q In 1964 if Rose Cipollone was told that
9 she had a 98.6 percent chance of not getting lung
10 cancer from a lifetime of cigarette smoking, would
11 that have been an ambiguous or an unambiguous message
12 to her?

13 A Let's say it would have communicated -- it
14 would have tended to minimize the sense of risk that
15 might have motivated her to quit smoking; that is, it
16 would have emphasized the positive.

17 It would not have talked about
18 relativeness, would not have talked about other
19 diseases.

20 I'm not -- does that answer your
21 question? I'm not sure.

22 Q Let me ask you this question: If a
23 dependent smoker gets the message that I might get
24 cancer from my cigarette smoking and I might not get
25 cancer from my cigarette smoking, is that an ambiguous

1 message?

2 A That has some ambiguity in it. The degree of
3 ambiguity would, again, depend on other information
4 such as --

5 Q Internalized and personalized, would that
6 be sufficient to motivate a dependent smoker to try to
7 stop smoking?

8 MR. DARNELL: I'm sorry. I don't know if
9 that was a question.

10 Can I have it read back, please.

11 (Read back.)

12 MR. DARNELL: Objection as to form.

13 I don't know what's internalized or
14 personalized --

15 Q I meant to use your terms, personalized,
16 grasped and accepted. I adopt that modification.

17 A To the extent that the person interpreted that
18 as representing a risk to them and didn't dismiss it,
19 then that would help motivate them to change their
20 behavior.

21 Q Let's go on.

22 How would you describe Rose Cipollone's
23 personality, Doctor?

24 MR. DARNELL: Time frame.

25 Q Did her personality change over time?

1 A Actually people describe her as fairly
2 consistent.

3 Q Do you need a time frame to answer that
4 question fully and completely?

5 A Well, may I reserve that?

6 Let me try to describe it and maybe we
7 can move forward.

8 Q Okay.

9 A She -- there seems to be some consensus that
10 she was outgoing, that she was loving, that she was
11 sociable, that she was strong-willed.

12 That's how I would characterize her
13 personality.

14 Q Intelligent?

15 A Hard to say. Reasonably so.

16 Q Pardon me?

17 A Reasonably so.

18 Q What do you base your --

19 A I have no reason to think she was dumb.

20 Q Well, in coming to your opinions in this
21 case was it important to you to arrive at a conclusion
22 as to her degree of intelligence?

23 A It was somewhat relevant.

24 For example, I think she was able to
25 answer questions reasonably and to understand them.

1 You know, I had no -- sometimes if you
2 read an interview and it's clear the person's
3 intelligence doesn't allow them to give reasonable
4 responses, you -- I would tend to discount their
5 responses.

6 She seemed by and large, with some
7 exceptions, to grasp the questions that were posed to
8 her. She -- I didn't look at this closely, but her
9 vocabulary seemed reasonable.

10 I was -- I would describe her I guess as
11 reasonably intelligent and also relatively
12 unsophisticated.

13 Q And you describe her as relatively
14 unsophisticated right through to 1981?

15 A Yeah, I think so.

16 Q What do you mean by "relatively
17 unsophisticated"?

18 A I'm attending in part to her education which
19 was not that substantial, certainly by today's
20 standards.

21 Again, although I think she was able to
22 respond to the questions, her responses don't -- you
23 know, reflect some lack of sophistication. She
24 sometimes had to ask what words meant or her word use
25 was not that rich.

1 Some of the -- I'm making an inference
2 from the family's blue collar background to some
3 extent. I am aware that she read a fair amount.

4 Q Would you agree that there was no
5 cognitive impairment of her logic? There was nothing
6 wrong with her brain?

7 A In what area?

8 Q In any area.

9 A With her brain?

10 Q Right.

11 A You mean organically if we went in would we
12 find a lesion of some sort?

13 I have no reason to think we would.

14 Q And what about cognitive impairment in
15 her logic? Do you agree that's not evidence of any
16 cognitive impairment in her logic?

17 A That gets more complicated because many of us
18 have trouble thinking logically about matters that are
19 difficult for, us and I think that was probably true
20 of her. So -- I wouldn't describe that as a brain
21 dysfunction.

22 Q What's your basis for saying that she was
23 strong-willed?

24 A I'm basing it very much on the reports of
25 family members.

1 Q Was she a trusting individual?

2 A I think -- I have some sense that she was
3 trusting of authority.

4 In fact, that's part of what I even --
5 suppose that's part of what I think as
6 unsophisticated. At least today we are much more --
7 much less trusting of authority.

8 Q Is there some way a psychologist has of
9 testing whether a person is a trusting individual?

10 A I think there are standardized tests for that
11 and --

12 Q Have you ever given one of those
13 standardized tests?

14 A No. It's not a question that's typically posed
15 in a clinical situation.

16 Q Is it -- but there are tests available
17 for it?

18 A Uh-huh.

19 Q Give us the name of some tests available
20 for it.

21 A I would need to consult references. I don't
22 carry with me in my mind the name of every test.

23 Q Okay. Well, tell us what information
24 those tests seek in order to make a determination
25 about whether a person's personality is a trusting

1 personality.

2 A I would need to look at them carefully.

3 Again, I'm aware, and even not with
4 perfect certainty, that they exist. They have -- I'm
5 not aware of any clinical use for those tests, and so
6 I'm not intimately familiar with them.

7 Q So you can't name them and you've never
8 used one; correct?

9 A That's correct.

10 Q And you can't tell us now what
11 information is elicited by those tests in order to
12 determine whether or not a person is a -- has a
13 trusting personality; am I right?

14 A Right. I can't tell you what right now.

15 Q What's your basis for saying she was
16 trusting of authority?

17 A She described, in fact, in her deposition --
18 maybe I better find it.

19 Again, I want to be very careful not to
20 misrepresent her -- her -- she gave information
21 relevant to her trusting -- trustingness.

22 Q So is it correct that your only basis is
23 something that she said in her deposition for coming
24 to the conclusion that she was trusting of authority?

25 A Some of it is based on -- for example, she

1 describes -- it is based on information from hers and
2 other depositions. It seems as though she was
3 trusting of authorities.

4 Q Now, what do you mean when you say
5 "trusting of authorities"? Tell us what you mean by
6 that.

7 A Well, for example, she stated that she didn't
8 think that the government would allow tobacco
9 companies to sell a product that was dangerous.

10 So she had a sense somehow that this
11 larger authority would protect her, and indeed she had
12 the same view toward the tobacco companies themselves.

13 Q Did she view the tobacco companies as
14 authorities?

15 A Yeah. As public institutions.

16 Q And she viewed -- and she viewed the
17 government as authorities?

18 A I believe she did, yes.

19 Q So did she -- withdrawn.

20 Anything else?

21 What else do you mean with respect to
22 trusting authorities, that she trusted the government
23 and tobacco companies?

24 A Again, part of my inference is from her
25 background both in terms of education, where she grew

1 up and so on, and the times, that she would have very
2 likely been trusting.

3 Q Did she trust all companies?

4 A Oil companies?

5 Q All companies.

6 A I'm sorry.

7 MR. DARNELL: Off the record.

8 (Discussion off the record.)

9 THE WITNESS: Are we back on the record?

10 BY MR. KEARNEY:

11 Q Did she trust all companies?

12 A It's very hard for me to judge that because
13 what was elicited in depositions and interviews didn't
14 really elicit that information.

15 Q I thought you told me part of her
16 personality was that she was a person trusting of
17 authorities?

18 A Right. I think she would have been predisposed
19 to trust large companies, yes.

20 Q So she trusted her teachers in school?

21 A I would think she would have been predisposed
22 to respect them, yeah.

23 Q Was she predisposed to trust the Surgeon
24 General of the United States?

25 A Oh, I think she probably was. And that's --

1 Q Her mother?

2 A Her mother? Certainly she would have respected
3 her. Whether she would trust her as an authority on
4 certain things is less clear, because in certain
5 cultures mothers are not seen as authorities on
6 worldly matters.

7 Q Are you aware of how mothers are
8 perceived by their daughters in the culture in which
9 Rose Cipollone grew up?

10 A As -- I would -- I would venture a guess that
11 she respected her mother, but it seems to me plausible
12 that she would not have trusted her as an authority on
13 science, for example.

14 Q I'm asking you a different question.
15 I'm asking you, are you an expert --

16 A Am I an expert on that? No.

17 Q -- on the culture?

18 A I am making a reasonable inference of the sort
19 that clinical psychologists make all the time.

20 But am I an expert on the Italian
21 American culture? No.

22 Q In the 1940s?

23 A No. I'm not an expert on that.

24 Q Have you ever studied how Italian
25 American daughters viewed their mothers in the 1940s?

1 A Studied in the classroom? No.

2 Q Studied in the classroom; in a library;
3 done any research on it?

4 A No.

5 Q Research any articles on it?

6 A Clinicians reasonably rely on broad cultural
7 information and on experience with clients on -- we
8 draw on much of the same information a layperson has.

9 So again, to be clear, I'm not an expert
10 on that.

11 Q Why did Mrs. Cipollone start to smoke?

12 A Why did she start? This is in '42.

13 I think that she saw it as glamorous and
14 sophisticated. And as many -- that's, in fact, the
15 reason very many people even today start smoking.

16 Q Did she -- tell us why she continued to
17 smoke right away.

18 A I need a time frame there.

19 Q Pardon me?

20 A I do need a time frame to answer that.

21 Q Okay. 1943 to '47.

22 A Let me answer it this way: I think there was a
23 shift in her reasons for smoking.

24 So when I say that she started smoking in
25 order to feel sophisticated, I don't mean that that

1 accounted just for her first cigarette.

2 Rather, the way I see it that those
3 motives were dominant early in her smoking career.
4 They faded in importance to be replaced by motives to
5 do with dependence.

6 She stated in 1943 that she was beginning
7 to develop a need to smoke. Those are her words she
8 stated in 1946. She stated that in 1946 she found it
9 hard to stop.

10 So in my judgment motives related to
11 dependence and compulsion increased in prominence
12 during the period that you're asking about.

13 Q Why did she choose Chesterfield
14 cigarettes to smoke in 1942, '43?

15 A Again, I want to give you an accurate answer so
16 I want to be sure I don't misrepresent her.

17 May I look at her deposition? Do we have
18 the right volume here?

19 No, we don't.

20 MR. DARNELL: Which one do you need?

21 THE WITNESS: I need the volume that has
22 pages in the low hundreds, like 120s.

23 (Recess.)

24 THE WITNESS: Thank you.

25 (Witness reviews.)

3

1 A This confirms what my -- my initial impression.
2 She thought Chesterfields were glamorous based on some
3 ads that she'd -- again she reports, and since she
4 also perceived certain other brands, I believe she
5 reports that she saw Lucky Strikes as being masculine
6 and for men.

7 That wasn't the image to which she
8 aspired and so she -- she chose Chesterfields based on
9 their image of glamour, which appealed to her.

10 Q In the 1940s did she have any perception
11 at all of any health risks in connection with her
12 smoking cigarettes?

13 A Again, let me be sure -- I believe that she had
14 a very minimal perception.

15 Q But she had some perception of health
16 risks; am I correct?

17 A Mostly as I recall -- well, let me -- not as I
18 recall. Let me try to answer you accurately.

19 (Witness reviews.)

20 Q I see you're going through your notes in
21 order to shortcut that.

22 You're going to have to read through all
23 your notes in order to answer that question?

24 A No, not all of my notes.

25 Q Go ahead.

1 A Again, I want to respond to you accurately.

2 And since it's very much based on her
3 report as well as something about the environment, I
4 want to not misrepresent her.

5 (Witness reviews.)

6 THE WITNESS: Alan, I'm afraid I am going
7 to have to use you as a runner again.

8 MR. DARNELL: No problem.

9 THE WITNESS: Pages in the low 500s.

10 MR. DARNELL: I'll bring them all in.

11 MR. KEARNEY: I'm going to withdraw the
12 question, Alan.

13 Let's proceed with the deposition.

14 MR. DARNELL: Okay.

15 BY MR. KEARNEY:

16 Q Am I correct, Doctor, that the only basis
17 that you have for an opinion about what Rose Cipollone
18 knew of health risks associated with cigarette smoking
19 in the 1940s is what Rose Cipollone said in her
20 deposition?

21 A No. I think that that is very important, but I
22 think --

23 Q What other information do you have about
24 Rose Cipollone's perception of health risks of
25 cigarette smoking in the '40s other than her

1 deposition?

2 A It's my understanding that most people in her
3 situation would not have been well informed about the
4 health risks.

5 Q Would most people -- I didn't mean to cut
6 you off. Go ahead.

7 A It's -- where was I?

8 Q You said that most people in her
9 situation would not be well informed about the health
10 risks of cigarette smoking.

11 A Right. And, again, also that most teenagers
12 then and today would not -- would tend not to grasp
13 and personalize the health information.

14 So I base it on those as well, but I
15 would -- I would like to, if you want me to respond
16 more fully to the question, to try to use the
17 information that she gave as well.

18 Q Now, you said most people were not well
19 informed.

20 A Uh-huh.

21 Q Most people in her situation.

22 What were most people in her situation
23 informed about -- whether they were well informed or
24 not, what was it that they were informed about the
25 health risks of cigarette smoking in the 1940s?

1 We're talking from '43 up to '50.

2 A I think I would guess that people had a vague
3 sense that it might be bad for you.

4 Q Let me ask you this question: Did most
5 people in her situation believe that cigarette smoking
6 was safe?

7 A I think they thought it was relatively safe,
8 yeah.

9 Q But did they think it was entirely save,
10 that smoking a lifetime was safe?

11 A That would be hard to say.

12 Q You don't know?

13 A It's -- I don't know.

14 Q You mentioned -- did Rose Cipollone
15 smoke, by the way, for pleasure at any time in her
16 life?

17 A What do you mean by that?

18 Q Did Rose Cipollone at any time in her
19 life smoke for the pleasure of smoking?

20 A To answer that we would need to analyze the
21 pleasures of smoking.

22 Q Okay.

23 A So --

24 Q You can't answer that just by the use of
25 the word pleasure?

1 A Well, I think it gets very complicated and I
2 would hate for you to have a different interpretation
3 than I do about what that means.

4 Q No. We're, again, fine just as long as
5 at trial when I ask you the question about Rose
6 Cipollone smoking for pleasure your answer is going to
7 be the same.

8 MR. DARNELL: It depends on how pleasure
9 is defined.

10 Q You're going to ask me for a definition
11 of pleasure?

12 A What I'm saying is, let me give you firstly,
13 Dr. Dunn from the -- from Philip Morris made a
14 statement with which I agreed; which is that
15 people's -- smokers self reports of what they get out
16 of smoking are sometimes erroneous.

17 And I think that's particularly true when
18 people attribute their smoking to vague motives like
19 pleasure.

20 Q Was there anything that Rose Cipollone --

21 MR. DARNELL: Excuse me. I don't think
22 he was finished. He was trying to answer your
23 question. Please let him do so.

24 Continue, please, Doctor.

25 A In my experience sometimes when people say they

1 smoke for pleasure, what they mean is that if they're
2 uncomfortable perhaps because of withdrawal it feels
3 better after they smoke.

4 And I think that's not -- that may not be
5 what you meant by smoking for pleasure, and so I want
6 to be careful, for example, to distinguish those.

7 Q Did she smoke for taste?

8 A Again --

9 Q You can't answer that question either?

10 Did she enjoy the taste of cigarette
11 smoking?

12 A Again, with lots of repetition she may have
13 come to enjoy it. I wouldn't count that as a major
14 motive for her smoking.

15 Q Did she ever enjoy the taste of a
16 cigarette?

17 A It's possible that she did.

18 Q Did she ever enjoy the aroma of a
19 cigarette?

20 A It's possible that she did.

21 Q Did she ever enjoy smoking cigarettes?

22 A It's possible that she did. Again, especially
23 relative to not smoking cigarettes.

24 Q Did she ever smoke for relaxation?

25 A Can you clarify what you mean by that? Because

1 that really is ambiguous.

2 Q Did she smoke -- let's -- you need a
3 definition of relaxation in order to answer that
4 question?

5 A At least in the area of smoking that word is
6 used in several different ways and, again, I don't
7 want us to misunderstand each other.

8 Q Doctor, I just want to get back to
9 your -- the opinion that you gave us earlier this
10 afternoon and see if I can complete some examination
11 on the remaining components of that.

12 A Okay.

13 Q Among other things you testified that
14 it's your opinion that she had an impaired ability to
15 act flexibly with regard to smoking.

16 A That's right.

17 Q When did she get this impaired ability to
18 act flexibly with regard to smoking?

19 A Let me say again that I consider flexibility,
20 like these other things, a matter of degree rather
21 than a yes or no.

22 So her flexibility was somewhat impaired
23 I would say in '47, and probably became more so later.

24 Q Not before '47?

25 A It's possible, but the evidence isn't that

1 clear.

2 Let me make a distinction which I think
3 is gonna be important for us between what was actually
4 the case and what we're able to learn from debriefing
5 her retrospective history.

6 So I'm not saying she wasn't -- I'm
7 saying the data trail isn't strong -- doesn't permit
8 as strong a conclusion as in '47.

9 Q Let me ask you this question: Are you
10 going to testify at trial that she had an impaired
11 ability to act flexibly with regard to smoking prior
12 to 1947?

13 MR. DARNELL: I think that's an improper
14 question as to what he's going to testify to.

15 Q Is there enough information, Doctor, for
16 you to come to a conclusion, and have you come to a
17 conclusion on whether or not she had an impaired
18 ability to act flexibly with regard to smoking prior
19 to '47?

20 A I think it was beginning to become impaired.

21 She states that she needed to smoke. She
22 states that it was hard to stop. So from '47 there
23 was some -- there's some fragmentary evidence building
24 up suggesting that her ability is starting to become
25 impaired. The evidence becomes clearer in '47.

1 Q Did she try to quit or cut down prior to
2 1947?

3 A Not that I know of. I don't think so.

4 Q Okay. What is the degree to which she
5 had an impaired ability to act flexibly with regard to
6 smoking?

7 MR. DARNELL: At what point in time?

8 A I don't understand. Never mind time frame, I
9 don't understand the question.

10 Q All right. Maybe I ought to start with
11 this: Describe for us the ability to act flexibly
12 with regard to smoking.

13 A Let me try and do that.

14 For most of us most of our behavior is
15 fairly flexible; that is, many of the things we do,
16 you might say using lay language, that we can take
17 them or leave them.

18 It also means that our behavior is
19 effected -- is often effected by cues and by
20 incentives.

21 If I may give you an example. You've had
22 a cup of coffee, but I suspect that if someone had
23 said, let me give you a lot of money not to drink that
24 cup of coffee -- although I don't know that -- you
25 might well have said, no problem, I'd rather have

1 \$1,000 than drink this cup of coffee; that is, you can
2 take it or leave it. You are able to respond
3 flexibly.

4 Similarly, if there was a rule here that
5 you could not drink coffee, you might not suffer
6 duress, you might be able to stand it, you wouldn't
7 decline to attend the deposition on that account. So
8 it shows that you're flexible, you can respond to
9 social cues, to incentives to other -- other goods and
10 organismic drives that you have.

11 A person losses flexibility when the
12 ability to respond to those different controlling cues
13 is diminished and they're, in essence, increasingly
14 flexible about their behavior. It becomes
15 stereotyped, takes on a compulsive character.

16 I think I've answered your question.

17 Q Does any smoker have an unimpaired
18 ability to act flexibly with regard to smoking?

19 A Yes, I believe so.

20 Q Pardon me?

21 A I believe that some do, yes.

22 Q Could you describe those smokers for us?

23 A Certainly I will and try to be accurate.

24 In fact, I think that many of us know
25 such people. I know I've encountered people who may

1 smoke at a party, but if you tell them not to smoke
2 they don't bat an eyelash about it, they simply won't
3 do it.

4 If you -- they certainly would not weigh
5 it, their opportunity to smoke, for example, into
6 whether they're going to go to a party or not. It's
7 simply they can take it or leave it.

8 And that would be an example of
9 exercising that take it or leave it, flexible attitude
10 toward smoking.

11 Q All right. What's your basis for saying
12 that Rose Cipollone had an impaired ability to act
13 flexibly?

14 A Because in a number of respects she -- she does
15 not display the kind of behavior I've just described.

16 So for example, she would cut her visits
17 to her daughter's short, the daughter reports, because
18 her daughter didn't permit her to smoke in the house.
19 That speaks exactly to the kind of example and concept
20 I've just given you.

21 She did things which, for example, were
22 uncharacteristic of her in order to salvage her
23 smoking. She would hide cigarettes. She was unable
24 to respond to her husband's urgings.

25 You know if, if my wife didn't like me to

1 talk loudly on the phone, which it happens she doesn't
2 like, I have no trouble moderating that behavior.

3 In contrast, in the case of Rose
4 Cipollone, in the face of what seems to have been a
5 very intensive lobbying, if you will, by her husband,
6 she was unable to respond to that cue.

7 Another example of an incentive is her
8 husband offering her fur. I'm not a big fan of fur,
9 but if someone offered me something valuable to give
10 up a behavior that I could take or leave, not only
11 would I do it, but it would be no conflict and it
12 would be easy.

13 Another example which I think is actually
14 quite telling, is that even after she had part of her
15 lung removed she continued to furtively smoke some of
16 the time. That shows the degree to which her
17 behavior -- she'd lost ability to respond to some
18 extent to cues.

19 And again, I think that that may well
20 have been progressive throughout her smoking career.

21 Q How do you know that she just didn't want
22 to -- she just didn't want to tell her husband and her
23 doctor or let them know that she wanted to take a few
24 cigarettes a day --

25 A It's clear --

1 Q -- what's inflexible about that?

2 A It's clear that she didn't want them to know.

3 Q Right.

4 A But she also -- well, for example, she
5 describes for herself that she felt guilty about it.

6 So it shows that she found herself in the
7 position of acting, in effect, against her own values,
8 against her own goals and aspirations.

9 Q What's your basis for saying that she was
10 unable to respond to her husband's constant lobbying
11 to stop smoking?

12 A She said so. She said that it was very
13 difficult and, in fact, she -- she was unresponsive.

14 Q Is it the case that every spouse who does
15 not stop smoking in response to urges of their spouse
16 is unable? Did it ever occur to you that somebody
17 might be unwilling in that situation to respond to
18 their spouses entreaties?

19 A I tried to give you several examples because
20 the way one makes a judgment about these things is
21 configural; that is, one has to weigh the pattern of
22 the evidence.

23 So if she had been able to respond to
24 things other than her husband's urging I would say
25 well, you know, she wanted to tell him where to go.

1 But the -- let me finish. So I tried to
2 give you several examples from several domains because
3 the way a judgment is made is configural in that
4 sense; that is, you look at a range of behavior.

5 Q All right. What's your basis for saying
6 that she was -- what's your basis for saying that the
7 reason that she did not abide by her husband's urgings
8 to stop smoking was -- withdraw the question. I'm
9 going to do another one.

10 You have determined that she was unable
11 to respond to her husband's entreaties?

12 A She had difficulty.

13 Q She had difficulty?

14 A And she had lost some flexibility.

15 Q And it was not that she was unwilling?

16 A Again, let me explain that that is complicated,
17 because to some extent what one is willing to do
18 depends on what one thinks one is able to do.

19 Q Is it your testimony that Mrs. Cipollone
20 was -- when her husband told her to stop smoking and
21 urged her to stop smoking, your testimony is that she
22 was willing to do that? She wanted to respond to her
23 husband?

24 A No, I didn't say that.

25 Q She wanted to stop smoking?

1 A I didn't say that.

2 Q Was she willing? Did she want to do what
3 he was telling her to do?

4 A I think some of the times she did.

5 She reports that it was very hard and
6 that that -- she does that in the context of
7 explaining why she didn't do it.

8 Q And some of the times she wasn't willing
9 to do what her husband told her to do; is that
10 correct?

11 MR. DARNELL: With regard to smoking or
12 other items?

13 Q We're talking about her husband's
14 entreaties and urges to stop smoking. You understand
15 that, don't you?

16 A Yes, I do.

17 Q That's what this line of questioning is
18 about.

19 A I understand.

20 Q Okay.

21 A Her -- let me repeat again what I said.

22 That to some extent one isn't likely to
23 express willingness to take on something that one
24 feels incapable of doing.

25 Q Okay. When did Mrs. Cipollone --

1 A And, in fact, some of her reaction to her
2 husband was based on the fact, in my judgment, that
3 what he was asking her to do was something she felt
4 incapable of doing.

5 Q And that began right in the beginning,
6 1946 when he started asking her on first dates to stop
7 smoking?

8 A And, again, I have testified that I think it's
9 progressive and a matter of degree. And indeed she
10 states way back when that she found it hard to stop.

11 I'm not saying that that was a constant,
12 but I think that was an element even then.

13 Q Good. You mention that she could not
14 dispassionately evaluate information regarding hazards
15 of smoking.

16 What do you mean by that?

17 MR. DARNELL: Off the record.

18 (Discussion off the record.)

19 MR. KEARNEY: Let him answer the
20 question.

21 A I'm not sure that's a two-minute answer, but
22 I'll try.

23 Q Why don't you give me two minutes of
24 answer.

25 MR. SIRRIDGE: You have four minutes by

1 my watch.

2 THE WITNESS: You'll cut me off.

3 MR. DARNELL: Maybe it's not a
4 four-minute answer.

5 A I mean that one's ability to dispassionately
6 weigh information about one's own behavior depends in
7 part on things like the degree to which one feels one
8 can control the behavior.

9 That, for example, specifically one's
10 perception of a health risk to one's self may depend
11 in part, not completely, on how much -- to the extent
12 to which you feel you have control over this behavior.

13 Q How much have you been paid since you
14 were first contacted by Mr. Darnell for your work for
15 Mr. Darnell or Mr. Edell's firm?

16 MR. DARNELL: In this case?

17 Q I'm talking about Haines; I'm talking in
18 Cipollone; I'm talking in anything that you've worked
19 at the moment.

20 A I don't have an exact figure. I'm terrible at
21 billing.

22 But I think it's a reasonable ballpark to
23 say about \$12,000. I'm counting, by the way, today.

24 Q Pardon?

25 A I'm counting today.

1 MR. DARNELL: We're not paying for that,
2 they are.

3 Q What do you charge?

4 A Currently I charge \$150 an hour or \$1500 a day,
5 and twice that for deposition and testimony.

6 Q Do you have any bills or any time for
7 which you have not billed --

8 A Yes, I do.

9 Q -- the Darnell or Edell firm?

10 A Yes, I did. And that's counted in the
11 estimate.

12 Q That's counted in the estimate?

13 A Again, let me be clear that I couldn't swear on
14 that to the penny, but I think that's a reasonable
15 estimate.

16 Q Right. And that includes your work on
17 the Haines and Cipollone case?

18 A Correct.

19 MR. KEARNEY: Good. We'll begin -- What
20 time did you say, nine o'clock?

21 MR. DARNELL: No. Dr. Shiffman, as I
22 told you, had understood it would be ten. He has made
23 a phone consult at nine, which he expects to last a
24 half hour, so let's start at 9:30, 9:35, as close to
25 that as we can.

MR. KEARNEY: Okay.

THE WITNESS: See you tomorrow.

(The deposition is adjourned at 5:00

p.m.)

W I T N E S S C E R T I F I C A T E

I have read the foregoing transcript and
do hereby certify that it is a true and accurate
transcript of my testimony in the above matter.

SAUL MARK SHIFFMAN, Ph.D.

Sworn and subscribed to before me
this _____ day of _____, 19__

Notary Public

C E R T I F I C A T E

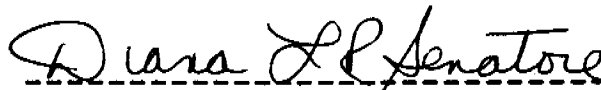

I, DIANA L.R. SENATORE, a Notary Public
and Certified Shorthand Reporter of the State of New
Jersey, do hereby certify that prior to the
commencement of the examination the witness,

SAUL MARK SHIFFMAN

was sworn by me to testify the truth, the whole truth
and nothing but the truth.

I DO FURTHER CERTIFY that the foregoing
is a true and accurate transcript of the testimony as
taken stenographically by and before me at the time
and on the date hereinbefore set forth.

I DO FURTHER CERTIFY that I am neither a
relative nor employee nor attorney or counsel of any
of the parties to this action, and that I am neither a
relative nor employee of such attorney or counsel, and
that I am not financially interested in the action.

DIANA L.R. SENATORE, C.S.R.
Certificate No. XI01397
Notary Public of New Jersey
My Commission expires October 31, 1994
